GIs returning after World War II created an entirely new automotive market niche when they bought surplus Jeeps and began exploring the rugged backcountry of the American West. This burgeoning market segment, which eventually became known as sport utility vehicles (SUVs), numbered about 40,000 units per year with offerings from Jeep, Scout, Toyota, and Land Rover. In 1966, Ford entered the fray with its Bronco, offering increased refinement, more power, and an innovative coil-spring front suspension. The Bronco caught on quickly and soon established a reputation as a solid backcountry performer. In Baja, the legendary accomplishments of racers such as Parnelli Jones, Rod Hall, and Bill Stroppe further

cemented the bobtail ' s reputation for toughness. Ford moved upstream with the introduction of the larger Bronco for 1978, witnessing a huge increase in sales for the second-generation trucks. The Twin Traction Beam front end was introduced in the third generation, and further refinements including more aerodynamic styling, greater luxury, and more powerful fuel-injected engines came on board in the generations that followed. Through it all, the Bronco retained its reputation as a tough, versatile, and comfortable rig, both on and off the paved road. With the reintroduction of the Bronco for 2020, Ford is producing a vehicle for a whole new generation of enthusiasts that looks to bring modern styling and performance to the market while building on the 30-year heritage of the first five generations of the Bronco so dearly loved by their owners. From the development process and details of the first trucks through the 1996

models, author Todd Zuercher shares technical details, rarely seen photos, and highlights of significant models along with the stories of those people whose lives have been intertwined with the Bronco for many years. This book will have new information for everyone and will be a must-have for longtime enthusiasts and new owners alike!

The Chinese state of the 1920s was one of disunified parts, ruled by warlords too strong for civilians to oust and too weak to resist the demands and bribes of foreign powers. China's treaty ports were crucibles of change in which congregated the educated elite, exposed to modern ways, who felt the need for a national revolution to revitalize their country and to provide her with a new, more integrated political system. Nationwide in their origins and representing varying political ideologies, this elite formed a loose coalition to achieve a common goal. In 1926 the first step in the military campaign known as the Northern Expedition was launched to conquer the armed forces of the warlords, the greatest obstacle in the path toward reunification of China. Until now, historians have ascribed much of the success of the Northern Expedition, culminating in the capture of Peking, to the Communist-led mass organizations who were reported to have won over the populace in the territory ahead of the National Revolutionary Army. Dr. Jordan's research, especially in Communist

materials, has uncovered evidence indicating that, although the mass organizations did aid the army at particular points in 1925 and 1926, there had also been a side to the mass movement that was disruptive to the goal of reunification. Of additional import, some of the key participants in the later governments of Taiwan and Peking—among them Chiang Kai-shek, Mao Tse-tung, Chou En-lai, and Lin Piao—received their basic political training in the National Revolution. Business Week Wiley Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. Over a Barrel Government Printing Office An in-depth, hard-hitting account of the mistakes, miscalculations and myopia that have doomed America's automobile industry. In the 1990s, Detroit's Big Three automobile companies were riding high. The introduction of the minivan and the SUV had revitalized the industry, and it was

widely believed that Detroit had miraculously overcome the threat of foreign imports and regained its ascendant position. As Micheline Maynard makes brilliantly clear in *THE END OF DETROIT*, however, the traditional American car industry was, in fact, headed for disaster. Maynard argues that by focusing on high-profit trucks and SUVs, the Big Three missed a golden opportunity to win back the American car-buyer. Foreign companies like Toyota and Honda solidified their dominance in family and economy cars, gained market share in high-margin luxury cars, and, in an ironic twist, soon stormed in with their own sophisticatedly engineered and marketed SUVs, pickups and minivans. Detroit, suffering from a "good enough" syndrome and wedded to ineffective marketing gimmicks like rebates and zero-percent financing, failed to give consumers what they really wanted—reliability, the latest technology and good design at a

reasonable cost. Drawing on a wide range of interviews with industry leaders, including Toyota 's Fujio Cho, Nissan 's Carlos Ghosn, Chrysler 's Dieter Zetsche, BMW 's Helmut Panke, and GM 's Robert Lutz, as well as car designers, engineers, test drivers and owners, Maynard presents a stark picture of the culture of arrogance and insularity that led American car manufacturers astray. Maynard predicts that, by the end of the decade, one of the American car makers will no longer exist in its present form.
