\$20 Per Gallon
Routledge

The atmosphere is getting fat on our carbon and other greenhouse gas emissions and it needs our help. We live in a world of excess, consuming too much of everything-- food, clothes, cars, toys, shoes, bricks, and mortar. Our bingeing is often so extreme that it threatens our own health and wellbeing. And we are not the only ones who are getting sick. The Earth, which provides

the food, air, water, and land that sustains us, is also under severe pressure. We either take steps to put our personal and planetary systems back into balance or we suffer the consequences. So, what does any unhealthy overweight person do when the doctor tells him or her that they are eating themselves into an early grave? Go on a diet! This is the must-have guide to the most important diet ever, explaining climate change concepts, problems, and solutions in ways that anyone can easily understand. Following a six-step climate diet plan, families will be able to count their carbon calories and learn how to reduce them, leaving us with a slim healthy planet now and for the future.

As Orange County's only paid subscription

lifestyle magazine with circulation figures guaranteed by the Audit Bureau of Circulation, Orange Coast is the definitive guidebook into the county's luxe lifestyle.

BUYING GUIDE ALL NEW FOR 2005
 Historian Thomas J. Misa's sweeping history of the relationship between technology and society over the past 500 years reveals how technological innovations have shaped -- and have been shaped by -- the cultures in which they arose. Spanning the preindustrial past, the age of scientific, political, and industrial revolutions, as well as the more recent eras of imperialism, modernism, and global security, this compelling work evaluates what Misa calls "the question of technology." Misa brings his acclaimed text up to date by examining how today's unsustainable energy systems, insecure information networks, and vulnerable global

shipping have helped foster geopolitical risks and instability. A masterful analysis of how technology and culture have influenced each other over five centuries, Leonardo to the Internet frames a history that illuminates modern-day problems and prospects faced by our technology-dependent world. Praise for the first edition "Closely reasoned, reflective, and written with insight, grace, and wit, Misa's book takes us on a personal tour of technology and history, seeking to define and analyze paradigmatic technological eras." -- Technology and Culture "Follows [Thomas] Hughes's model of combining an engaging historical narrative with deeper lessons about technology." -- American Scholar "His case studies, such as that of Italian futurism or the localizations of the global McDonalds, provide good starting

points for thought and discussion." -- Journal of Interdisciplinary History "This review cannot do justice to the precision and grace with which Misa analyzes technologies in their social contexts. He convincingly demonstrates the usefulness of his conceptual model." -- History and Technology "A fascinating, informative, and well-illustrated book." -- Choice

The Government as Dominant Shareholder: How Should the Taxpayers' Ownership Rights Be Exercised?
Serial No. 111-132, December 16, 2009, 111-1 Hearing, *
This book is about how to develop future automotive products by applying the latest methodologies based on a systems

engineering approach and by taking into account many issues facing the auto industry such as meeting government safety, emissions and fuel economy regulations, incorporating advances in new technology applications in structural materials, power trains, vehicle lighting systems, displays and telematics, and satisfying the very demanding customer. It is financially disastrous for any automotive company to create a vehicle that very few people want. To design an automotive product that will be successful in the marketplace requires carefully orchestrated teamwork of experts from many disciplines, substantial amount of resources, and application of proven techniques at the right time during the product development process. Automotive Product Development: A Systems Engineering Implementation is intended for company

management personnel and graduate students in engineering, business management and other disciplines associated with the development of automotive and other complex products.

The Climate Diet
Test reports, profiles, and advice on nearly 200 new cars, sport-utility vehicles, minivans, and pickups are provided by America's #1 consumer product-testing center. 240 photos and charts.

Automobile Book 2002
This 2002 edition of the only complete new-car buying guide includes profiles and photos of new models, retail and dealer invoice prices, mileage ratings, warranties, and safety features. Also includes consumer tips on shopping, leasing, lemon laws, insurance, and much more.

Consumer Reports 2002
An extraordinarily insightful and

thought-provoking look at how our society and culture are going to change, and change rapidly, as the price of gasoline, heating oil, and all other everyday consumer products that are derived from oil continue to escalate. Imagine an everyday world in which the price of gasoline (and oil) continues to go up, and up, and up. Think about the immediate impact that would have on our lives. Of course, everybody already knows how about gasoline has affected our driving habits. People can't wait to junk their gas-guzzling SUVs for a new Prius. But there are more, not-so-obvious changes on the horizon that Chris Steiner tracks brilliantly in this provocative work. Consider the following societal changes: people who own homes in far-

off suburbs will soon realize that there's no longer any market for their houses (reason: nobody wants to live too far away because it's too expensive to commute to work). Telecommuting will begin to expand rapidly. Trains will become the mode of national transportation (as it used to be) as the price of flying becomes prohibitive. Families will begin to migrate southward as the price of heating northern homes in the winter is too pricey. Cheap everyday items that are comprised of plastic will go away because of the rising price to produce them (plastic is derived from oil). And this is just the beginning of a huge and overwhelming domino effect that our way of life will undergo in the

years to come. Steiner, an engineer by training before turning to journalism, sees how this simple but constant rise in oil and gas prices will totally re-structure our lifestyle. But what may be surprising to readers is that all of these changes may not be negative - but actually will usher in some new and very promising aspects of our society. Steiner will probe how the liberation of technology and innovation, triggered by climbing gas prices, will change our lives. The book may start as an alarmist's exercise.... but don't be misled. The future will be exhilarating. *Transportation Energy Data Book* Now you can get the wisdom of one full year of "Consumer Reports" in one place. We've assembled all
