Defence Planning as Strategic Fact provides and elaborates on an "upstream" focus on the variegated organizational, political and conceptual practices of military, civilian administrative and political leaderships involved in defence planning, offering an important security and strategic studies supplement to the traditional "downstream" focus on the use of force. The book enables the reader to engage with the role of ideas in defence planning, of organizational processes and biases, path dependencies and administrative dynamics under the pressures of continuously changing domestic and international constraints. The chapters show how defence planning must be seen as a constitutive element of defence and strategic studies - that it is a strategic fact of its own which merits particular practical and scholarly attention. As defence planning creates the conditions behind every peace upheld or broken and every war won or lost, Defence Planning as Strategic Fact will be of great use to scholars of defence studies, strategic studies, and military studies. This book was originally published

as a special issue of Defence Studies.

Kappa Distributions: Theory and Applications in Plasmas presents the theoretical developments of kappa distributions, their applications in plasmas, and how they affect the underpinnings of our understanding of space and plasma physics, astrophysics, and statistical mechanics/thermodynamics. Separated into three major

parts, the book covers theoretical methods, analytical methods in plasmas, and applications in space plasmas. The first part of the book focuses on basic aspects of the statistical theory of kappa distributions, beginning with their connection to the solid backgrounds of non-extensive statistical mechanics. The book then moves on to plasma physics, and is devoted to analytical methods related to kappa distributions on various basic plasma topics, spanning linear/nonlinear plasma waves, solitons, shockwaves, and dusty plasmas. The final part of the book deals with applications in space plasmas, focusing on applications of theoretical and analytical developments in space plasmas from the heliosphere and beyond, in other astrophysical plasmas. Kappa Distributions is ideal for space, plasma, and statistical physicists; geophysicists, especially of the upper atmosphere; Earth and planetary scientists; and astrophysicists. Answers important questions, such as how plasma waves are affected by kappa distributions and how solar wind, magnetospheres, and other geophysical, space, and astrophysical plasmas can be modeled using kappa distributions Presents the

features of kappa distributions in the context of plasmas, including how kappa indices, temperatures, and densities vary among the species populations in different plasmas Provides readers with the information they need to decide which specific formula of kappa distribution should be used for a certain occasion and system (toolbox)

While lying has been a topic in the philosophy of language, there has been a lack of genuine linguistic analysis of lying. Exploring lying at the semantics-pragmatics interface, this book takes a contextualist stand by arguing that untruthful implicatures and presuppositions are part of the total signification of the act of lying.

Have you ever dreamed about getting on your motorcycle and traveling across the country? Are you envious when you see motorcyclists with far away out-of-state plates and wish that could be you? Are you tired of fantasizing about taking that dream motorcycle trip and want to turn that dream into a reality? Since I began sharing my motorcycle travel photos and videos on social media, I've received countless emails and questions from people interested in motorcycle touring but with no

idea where to begin. That's why I decided to write *Motorcyclist's Guide to Travel*. I want to be able to share this information with as many motorcyclists as possible. This book isn't about motorcycle travel theory or philosophy. I share with you the exact same methods and steps I use to plan and execute my own motorcycle trips all throughout the US. I cover how to plan and prepare for the trip, what to do during the trip as well as what to do after you return home. I go over different types of bikes and modifications you can make to them to make them more "touring worthy." I also cover all the different types of riding safety gear and what to look for when purchasing. And finally for those of you who don't know where you want to ride; that's ok. I also show you how come up with your own travel ideas. *Motorcyclist's Guide to Travel* will give you all the information you'll need to finally take that epic trip you've been dreaming about.

This paper discusses commodity prices might serve as a useful leading indicator of inflation, based on the relative importance of flexible auction markets for the determination of these prices. They thus may have a tendency to respond relatively quickly, especially in response to monetary disturbances. Estimation of alternative commodity-price indexes, in which the weights are chosen so as to minimize the residual variance in aggregate inflation regressions, was not fully successful. The commodity

prices do have a useful role to play as an aid in predicting inflation, so long as one is careful to interpret the relationships qualitatively and in the context of more general macroeconomic developments. The ratio of consumer to commodity price movements' changes over time, and the relative price of commodities undergoes long sustained swings; nonetheless, the qualitative linkages are quite evident in the data. Perhaps most importantly, turning points in commodity-price inflation frequently precede turning points in consumer-price inflation for the large industrial countries as a group.
