Computer science and economics have engaged in a lively interaction over the past fifteen years, resulting in the new field of algorithmic game theory. Many problems that are central to modern computer science, ranging from resource allocation in large networks to online advertising, involve interactions between multiple self-interested parties. Economics and game theory offer a host of useful models and definitions to reason about such problems. The flow of ideas also travels in the other direction, and concepts from computer science are increasingly important in economics. This book grew out of the author's Stanford University

course on algorithmic game theory, and aims to give students and other newcomers a quick and accessible introduction to many of the most important concepts in the field. The book also includes case studies on online advertising, wireless spectrum auctions, kidney exchange, and network management.

Public transport policy can contribute to reducing urban poverty both directly, by providing access and mobility for the poor, as well as by facilitating economic growth. Recently vilified as the prime dynamic driving home the breach between poor and rich nations, here the branding process is rehabilitated as a potential saviour of the economically underprivileged. Brand New Justice, now in a revised paperback edition, systematically analyses the success stories of the Top Thirteen nations, demonstrating that their wealth is based on the 'last mile' of the commercial process: buying raw materials and manufacturing cheaply in third world countries, these countries realise their lucrative profits by adding value through finishing, packaging and marketing and then selling the branded product on to the end-user at a hugely inflated price. The use of sophisticated global media techniques alongside a range of creative marketing activities are the lynchpins of this process. Applying his observations on economic history and the development and impact of global marketing, Anholt presents a cogent plan for developing nations to benefit from globalization. So long the helpless victim of capitalist trading systems, he shows that they can cross the divide and graduate from supplier nation to producer nation. Branding native produce on a global scale, making a commercial virtue out of perceived authenticity and otherness and fully capitalising on the 'last mile' benefits are key to this graduation and fundamental to forging a new global economic balance. Anholt argues with a forceful logic, but also backs his hypothesis with enticing glimpses of this process actually beginning to take place. Examining activities in India, Thailand, Russia and Africa among others, he shows the risks, challenges and pressures inherent in 'turning the tide', but above all he demonstrates the very real possibility of enlightened capitalism working as a force for good in global terms.

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos

Does going green change the face of design or only its content? The first book to outline principles for the aesthetics of sustainable design, *The Shape of Green* argues that beauty is inherent to sustainability, for how things look and feel is as important as how they're made. In addition to examining what makes something attractive or emotionally pleasing, Hosey connects these questions with practical design challenges. Can the shape of a car make it more aerodynamic and more attractive at the same time? Could buildings be constructed of porous materials that simultaneously clean the air and soothe the skin? Can cities become verdant, productive landscapes instead of wastelands of concrete? Drawing from a wealth of scientific research, Hosey demonstrates that form and image can enhance conservation, comfort, and community at every scale of design, from products to buildings to cities. Fully embracing the principles of ecology could revolutionize every aspect of design, in substance and in style. Aesthetic attraction isn't a superficial concern — it's an environmental imperative. Beauty could save the planet.
