Technological advances and the drive to digitalize business processes in aviation, tourism, and hospitality have forced the industries to go along with the digital movement. The results are often mixed. This book brings together contributions from leading scholars in the field and explores the digital transformation in these industries in Southeast Asia. The book looks at the

impact of digital transformation on the region and the issues and challenges brought about by this transformation. It also addresses trends in the industries from blockchain technology, AI, biometric and mobile technology applications to in-flight catering. It examines the impact of COVID-19 on the industries and how the pandemic has led to businesses adopting new business models. Through the case studies of digital

adoptions in the region, readers will gain insights on how the countries have leveraged new technologies and the implementation processes to drive digital transformation. The book aims to help scholars and policy makers understand the digital advances in the industries to better formulate responses in research and policy making and deliver effective digital transformation. This open access book is the first to systematically introduce the principles of urban informatics and its application to every aspect of

the city that involves its functioning, control, management, and future planning. It introduces new models and tools being developed to understand and implement these technologies that enable cities to function more efficiently – to become ‘ smart ’ and ‘ sustainable ’ . The smart city has quickly emerged as computers have become ever smaller to the point where they can be embedded into the very fabric of the city, as well as being central to new ways in which the population can

communicate and act. When cities are wired in this way, they have the potential to become sentient and responsive, generating massive streams of ‘ big ’ data in real time as well as providing immense opportunities for extracting new forms of urban data through crowdsourcing. This book offers a comprehensive review of the methods that form the core of urban informatics from various kinds of urban remote sensing to new approaches to machine learning and statistical modelling. It

provides a detailed technical introduction to the wide array of tools information scientists need to develop the key urban analytics that are fundamental to learning about the smart city, and it outlines ways in which these tools can be used to inform design and policy so that cities can become more efficient with a greater concern for environment and equity. This book analyses strategic discourse on the Himalayas from the perspective of India's interests. Home to many communities, cultures, natural resources and political boundaries, it is the geopolitical landscape of the Himalayas between India and China that dominates other narratives and discourses. The traditional notion of Himalayas as India's frontiers and buffer is challenged by China. Despite various mechanisms to address border resolution there are violations and transgressions from China. This book examines India's responses to the new emerging challenges in the Himalayas. How the statist

discourse on strategic interests incorporates people's discourse. It provides a nuanced understanding of India's strategic undertakings, diplomatic initiatives and development framework. This book will be a valuable addition to existing knowledge on the Himalayas between India and China. Scholars and practitioners interested in International Relations, Strategic Studies, Himalayan Studies and South Asian Studies will find it useful.

Transport Models in Urban Planning Practices Cambridge University Press

This book is the first to examine oil constraints and tourism, and addresses one of the key challenges for the tourism industry in the future. It provides an estimate of how much oil tourism consumes globally and summarises state-of-the-art information on oil resources, oil data and public

discourse. The volume also offers an analysis of the economic implications of increasing oil prices for tourism and discusses key dimensions relevant for tourism in a post peak oil world. It will be useful for tourism stakeholders globally, postgraduate students in tourism and resource management, ecological economists and those researching issues of resource efficiency, carrying capacity and global environmental change.

The Routledge Handbook of Transport Economics offers the first state of the art overview of the discipline of transport economics as it

stands today, reflective of key research and policy. Transport is an important area of study and one which is problem rich, stimulating a great deal of debate in areas which impact on everyday lives. Much of this focuses on the practicalities of the modern-day phenomenon of mass movement and all of the issues which surround it. The discipline of economics is central to this debate, and consequently the study and application of transport economics has a chief role to play in seeking to address

subjects relating to major transport issues. It can be argued that at the very heart of any transport issue or problem lies the underlying economics of the situation – understand that and you alleviate the problem. Featuring contributions from world-leading scholars and practitioners from across the globe, all of the chapters within this book are written from a practical perspective; theory is applied and developed using real-world examples. The book examines concepts, issues, ideas and

practicalities of transport provision in five key topic areas: public transport public transport reform economic development and transport modelling transport and the environment freight transport. A real strength of the book is in linking theory to practice, and hence the ‘ economics ’ that are examined in this text are not the economics of the abstract, but rather the economics of everyday living. Practical and insightful, this volume is an essential reference for any student or researcher working in all areas

of transport provision, ranging from planning, appraisal, regulation and freight; and for all practitioners looking to develop their professional knowledge and who are seeking professional accreditation.

Le pr é sent ouvrage est le r é sultat d ' une recherche

conjointe entre les Universit é s de Bologne, Rennes et Bruxelles sur le th è me de la dimension ext é rieure de l ' espace de libert é , de s é curit é et de justice de l ' Union europ é enne (ELSJ). Cette recherche a é t é soutenue par la Commission europ é enne dans le cadre de l ' Action Jean Monnet. Il associe des professeurs et chercheurs de renom qui conjuguent leurs comp é tences et situent leur analyse à l ' intersection des politiques en la mati è re et des politiques externes de l ' Union europ é enne. Les auteurs é valuent de mani è re critique

l ' impact du trait é de Lisbonne et de la pratique de l ' Union concernant la dimension ext é rieure de l ' ELSJ. Cette dimension dont l ' importance ne cesse de cro î tre oblige l ' Union à concilier des imp é ratifs parfois contradictoires entre les objectifs s é curitaires de l ' ELSJ ou ceux de l ' action ext é rieure, ou encore avec les valeurs sur lesquelles elle est fond é e. Les auteurs tentent de r é pondre à diff é rentes questions induites par le nouveau syst è me de repr é sentation ext é rieure de l ' Union dans le domaine de l ' ELSJ : Quelles sont les

retombés juridiques du nouveau système ? Quel est également son impact politique ? Ne risque-t-on pas une incursion croissante de la politique étrangère et de sécurité commune (PESC) dans les aspects sécuritaires de l'ELSJ ?

Parliamentary Papers

This book explores how transportation models can play a role in a changing transport planning and policy making context. Most models are rooted in decades of development work and are geared to offer value-free, academic and explicit knowledge to transport planning experts. However, planning practice has

changed dramatically over the years, resulting in a less technical rational view on the use of such knowledge – especially so in early, strategy making phases. More and more complex policy goals, integration of a wide area of other policy domains, a wider, ever-changing and much more mixed group of planning participants and much more focus on ‘wicked problems’. The book maps how this influences the effectiveness of transport modelling exercises and explores several state-of-the-art implementations. This book was published as a special issue of Transport Reviews. New York Observer and Chronicle The tactical organization of resources is a vital component to

any industry in modern society. Effectively managing the flow of materials through various networks ensures that the requirements of customers are met. Sustainable Logistics and Strategic Transportation Planning is a pivotal reference source for the latest research on the management of logistics through the lens of sustainability, as well as for emerging procedures that are particularly critical to the transportation sector. Highlighting international perspectives, conceptual frameworks, and targeted investigations, this book is ideally designed for policy makers, professionals, researchers, and upper-level students interested in logistics and transport systems.

Mechanical World

Marketing in the tourism and hospitality industry has transformed with the development of digital marketing tools and the evolution of social culture.

Recently, the advent of new technologies such as smartphones, artificial intelligence, virtual reality, robots, and new GIS systems has created more possibilities for marketing innovations.

Advancements in information technology are leading to changes in business processes, service standards, and

management mindsets.

Meanwhile, consumers are also adapting to the new marketing paradigm.

Researchers are interested in studying this newly-emerging and unpredictable business environment, customer decision making, new management tactics, and business analytic strategies.

Future of Tourism Marketing aims to assess the role of modern technologies in marketing tourism destinations and their effects on potential visitors. This book will provide an update

on research into the new marketing paradigm that is developing as a result of new technologies in a post-modern era. The chapters in this book were originally published in Journal of Travel & Tourism Marketing.
