Serve the nation in two capacities– as a civilian and as a soldier.

Applications are invited from gainfully

employed young citizens for an opportunity to put on the uniform and serving the nation as Territorial Army Officers (Non Departmental). The current updated edition of “Territorial Army Officer Recruitment Exam (Male & Female)” serves as a study guide for candidates who are aiming to appear in the exam. The entire syllabus of the book is divided into 4 parts as per the latest syllabus, special section is also allotted to current affairs. Based on the exam

pattern, it provides Solved Papers, giving insights of the exam questions. With the easy to understand language and student friendly notes this book is a total package of preparation.

The digital age has presented an exponential growth in the amount of data available to individuals looking to draw conclusions based on given or collected information across industries. Challenges associated with the analysis, security, sharing, storage, and visualization of large and complex data sets continue to plague data scientists and analysts alike as

traditional data processing applications struggle to adequately manage big data. **Big Data: Concepts, Methodologies, Tools, and Applications** is a multi-volume compendium of research-based perspectives and solutions within the realm of large-scale and complex data sets. Taking a multidisciplinary approach, this publication presents exhaustive coverage of crucial topics in the field of big data including diverse applications,

storage solutions, analysis techniques, and methods for searching and transferring large data sets, in addition to security issues. Emphasizing essential research in the field of data science, this publication is an ideal reference source for data analysts, IT professionals, researchers, and academics. **International Seminar on Nuclear War and Planetary Emergencies — 44th Session**

modern integrated electrical infrastructure commonly referred to as the smart grid. Featuring state-of-the-art, peer-reviewed entries from the Encyclopedia of Sustainability Science and Technology, this book provides a detailed introduction to select key topics which span energy technology, engineering, and urban planning. Worldwide experts discuss the integration of electric energy infrastructure into the broader critical infrastructures of the modern world and their various interdependencies. Dedicated chapters cover specific topics ranging from underground transmission and distribution, to energy and water interdependence, and their implications for urban areas. Coverage also includes the key role of new policy initiatives as catalysts of change.

Mechanics
for Natural Resources and Infrastructure Development contains the proceedings of the 14th ISRM International Congress (ISRM 2019, Foz do Iguaçu, Brazil, 13-19 September 2019). Starting in 1966 in Lisbon, Portugal,

the International Society for Rock Mechanics and Rock Engineering (ISRM) holds its Congress every four years. At this 14th occasion, the Congress brings together researchers, professors, engineers and students around contemporary themes relevant to rock mechanics and rock engineering.

Rock Mechanics for Natural Resources and Infrastructure Development contains 7 Keynote Lectures and 449 papers in ten chapters, covering topics ranging from fundamental research in rock mechanics, laboratory and experimental field studies, and petroleum, mining and civil engineering applications. Also included are the prestigious ISRM Award Lectures, the Leopold Muller Award Lecture by professor Peter K. Kaiser. and the Manuel Rocha Award Lecture by Dr. Quinghua Lei. Rock Mechanics for Natural Resources and Infrastructure Development is a must-read for academics,

engineers and students involved in rock mechanics and engineering. Proceedings in Earth and geosciences - Volume 6 The 'Proceedings in Earth and geosciences' series contains proceedings of peer-reviewed international conferences dealing in earth and geosciences. The main topics

covered by the series include: geotechnical engineering, underground construction, mining, rock mechanics, soil mechanics and hydrogeology .

Routledge
This book comprises the Proceedings of the 12th International Congress on Mathematical Education (ICME-12), which was

held at COEX in Seoul, Korea, from July 8th to 15th, 2012. ICME-12 brought together 3500 experts from 92 countries, working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice. This work aims to serve as a platform for deeper, more

sensitive and more collaborative involvement of all major contributors towards educational improvement and in research on the nature of teaching and learning in mathematics education. It introduces the major activities of ICME-12 which have successfully contributed to the sustainable development of mathematics education across the

world. The program provides food for thought and inspiration for practice for everyone with an interest in mathematics education and makes an essential reference for teacher educators, curriculum developers and researchers in mathematics education. The work includes the texts of the four plenary lectures and three plenary

panels and reports of three survey groups, five National presentations, the abstracts of fifty one Regular lectures, reports of thirty seven Topic Study Groups and seventeen Discussion Groups.

Selected Regular Lectures from

Springer
This book examines the concept of regional power in international relations. Using the emerging powers of India and South Africa as the case studies, it explores how regional powers simultaneously differ and share common features. The book develops a method to classify and

evaluate different types of regional powers and applies this typology to contemporary case studies of India and South Africa. Regional power is often expected to have a positive influence on region-specific problems of conflict, economic deprivation and political instability. In reality, an 'achievement- expectations

gap' can be seen in many regional powers, which can be analysed and understood through observable variation in regional power. The author discovers that in addition to the management of the internal regional order, regional powers have to establish individuality whilst fitting into the global international environment,

altering both regional dynamics and creating variance in the level of control within the region. Elucidating concepts and definitions, this book is an accessible and in-depth study that both introduces key concepts and provides a framework for the future study of regional power in international relations. Redefining Regional Power in

International Relations will be of interest to students and scholars of regionalism and international relations. *Beyond Traditional Probabilistic Methods in Economics* Springer Science & Business Media This book constitutes the refereed proceedings of the 12 International Conference on Product-Focused Software Process

Improvement, PROFES 2011, held in Torre Canne, Italy, in June 2011. The 24 revised full papers presented together with the abstracts of 2 keynote addresses were carefully reviewed and selected from 54 submissions. The papers are organized in topical sections on agile and lean practices, cross-model quality improvement, global and

competitive software development, managing diversity, product and process measurements, product-focused software process improvement, requirement process improvement, and software process improvement. presents recent research on probabilistic methods in economics, from machine learning to statistical analysis. Economics is a very important - and at the same a very difficult discipline. It is not easy to predict how an economy will evolve or to identify the measures needed to make an economy prosper. This book provides the

first scholarly investigation of prosecutorial discretion in the International Criminal Court (ICC) from an interdisciplinary perspective. This work analyses the discretionary power of the ICC prosecutor and its scope. It explains that there is a tendency to overlook the necessity of

distinguishing between the various usages of discretion when exercised as a power authorised by the law and effect when applying indeterminate legal thresholds. The author argues that the latter indeterminacy may give decision makers an unwarranted opportunity to exercise a wide range of

discretion, where extra-legal factors may be considered. In comparison, prosecutorial discretion allows decision makers to consider extra-legal considerations. This book also discusses the relevance of political considerations within the decision-making process in the context

of the exercise of prosecutorial discretion. It suggests that there need not be a conflict between the broad sense of justice as outlined in the Statute and political factors in giving effect to decisions. This book will be of interest to students of international law, global governance

and international relations. **Rock Mechanics for Natural Resources and Infrastructure Development - Full Papers** Disha Publications This book comprises the full selected Regular Lectures from the Proceedings of the 12th International Congress on Mathematical Education (ICME-12),

which was held at COEX in Seoul, Korea, from July 8th to 15th, 2012. ICME-12 brought together 4700 experts from 100 countries, working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice. These

selected Regular Lectures present the work of fifty-one prominent mathematics educators from all over the globe. The Lectures cover a wide spectrum of topics, themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of

mathematics education. This book is of particular interest to researchers, teachers and curriculum developers in mathematics education. *Target SSC CHSL (10 + 2) 2021 Exam - 5 Past Solved Papers + 20 Practice Sets with 3 Online Tests 3rd Edition* Routledge 'A Murderer's Legacy' is a sensational thriller with exciting and unpredictable

twists and turns leading to a tense climax. The death of a Columbian drug lord leads to a series of deadly events across London and southern England. A senior Metropolitan police officer risks everything when she sees an opportunity to enrich her life. A routine surveillance operation results in a gruesome assassination . The Foreign

Office is implicated in shady dealings with individuals for whom murder is no obstacle. Scotland Yard is drawn into the fray. Using unorthodox methods, maverick detective John Whiles sets about untangling the web of greed, corruption and murder. *Errorless UPPSC General Studies Prelim Paper 1 - 10 Year-wise Solved Papers (2010*

- 19) Routledge The banking system in Europe is large in relation to the economy. It is characterized by universal banking, and driven by a significant number of globally active national champions that are systemically important. Banks perform a vital role for the economy. But their leverage and deposit funding makes

them inherently vulnerable to bank runs. Axel Wieandt's role as former CEO of Hypo Real Estate, which he assumed immediately after the Lehman crisis in the fall of 2008, makes him uniquely placed to both examine the causes of the current situation of the European banking system and make suggestions for getting it back on track. His starting point is a comprehensive description of the European banking system and an analysis of the role of banks in the economy. He goes on to examine the root causes and implications of the Great Financial Crisis for the European banking system. He argues for full implementation of Banking Union with greater emphasis on market discipline and accountability.
