The Official Guide to Medical School Admissions Elsevier Health Sciences

Following up on her acclaimed Teach Students How to Learn, that describes teaching strategies to facilitate dramatic improvements in student learning and success, Sandra McGuire here presents these "secrets" direct to students. Her message is that "Any student can use simple, straightforward strategies to start making A's in their courses and enjoy a lifetime of deep, effective learning." Beginning with explaining how expectations about learning, and the study efforts required, differ between college and secondary school, the author introduces her readers, through the concept of metacognition, to the importance and powerful consequences of understanding themselves as learners. This framework and the recommended strategies that support it are useful for anyone moving on to a more advanced stage of education, so this book also has an intended audience of students preparing to go to high school, graduate school, or professional school. In a conversational tone, and liberally illustrated by anecdotes of past students, the author combines introducing readers to concepts like Bloom's Taxonomy (to illuminate the difference between studying and learning), fixed and growth mindsets, as well as to what brain science has to tell us about rest, nutrition and exercise, together with such highly specific learning strategies as how to read a textbook, manage their time and take tests. With engaging exercises and thought-provoking reflections, this book is an ideal motivational and practical text for study skills and first year experience courses.

Descriptive Study of Medical School Applicants Jones & Bartlett Learning

No wonder so many women are choosing to become physicians. The field of medicine offers abundant opportunities—to take care of individuals; improve public health; advance science; make a good living; and become a leader in the community, in an academic center, and in professional organizations. The demand for women physicians is growing dramatically, as more and more women health care consumers actively and specifically seek them. Chapters cover getting into medical school, overcoming gender stereotypes, finding a mentor, combining parenting with a career, and looking ahead into the career. While women are no longer newcomers to medicine, compared to men they still face extra challenges in the development and valuing of their skills and potential. This book will help women entering medicine to maximize their options and to have the fullest possible lives and careers. Women in Medicine draws on all the best available literature and on the experience of thousands of women physicians. It is a resource for anyone considering a medical career—whether they be in junior high school or in their

40s and contemplating a major life change—but especially women. This book will be useful throughout medical education and during early career development, as it includes tips on, for instance, interviewing for a job. Another helpful feature is that each chapter, except the last, concludes with a "Diagnose Yourself" section, to assist readers in beginning necessary preparations and to offer support. An extensive reference list facilitates follow-ups on areas of special interest

MCAT Critical Analysis and Reasoning Skills Review, 2nd Edition McGraw Hill Professional

Despite the changing demographics of the nation and a growing appreciation for diversity and inclusion as drivers of excellence in science, engineering, and medicine, Black Americans are severely underrepresented in these fields. Racism and bias are significant reasons for this disparity, with detrimental implications on individuals, health care organizations, and the nation as a whole. The Roundtable on Black Men and Black Women in Science, Engineering, and Medicine was launched at the National Academies of Sciences, Engineering, and Medicine in 2019 to identify key levers, drivers, and disruptors in government, industry, health care, and higher education where actions can have the most impact on increasing the participation of Black men and Black women in science, medicine, and engineering. On April 16, 2020, the Roundtable convened a workshop to explore the context for their work; to surface key issues and questions that the Roundtable should address in its initial phase; and to reach key stakeholders and constituents. This proceedings provides a record of the workshop.

"Biomedical Graduate School: A Planning Guide to the Admissions Process is an indispensable resource for college students aspiring to a PhD or MD-PhD. It helps students identify the structure of advanced degree programs and how these degrees can enhance their potential career options. The book discusses how students can optimize selection of academic courses, research experiences, and extracurricular activities during their undergraduate education to make them more competitive candidates for graduate and medical school programs. It guides students through the many facets of the admissions process, including criteria for selecting where to apply, how to prepare an application that maximizes their academic credentials, how to prepare for the interview process, how faculty evaluate applicants, and how to utilize a rational process to select a graduate school or medical school that will enable students to meet their academic goals." -- Back cover.

The National Book Award winning history of how racist ideas were created, spread, and deeply rooted in American society. Some Americans insist that we're living in a post-racial society. But racist thought is not just alive and well in America -- it is more sophisticated and more insidious than ever. And as award-winning historian Ibram X. Kendi argues, racist ideas have a long and lingering history, one in which nearly every great American thinker is complicit. In this deeply researched and fast-moving narrative, Kendi chronicles the entire story of anti-black racist ideas and their staggering power over the course of American history. He uses the life stories of five major American intellectuals to drive this history: Puritan minister Cotton Mather, Thomas Jefferson, abolitionist William Lloyd Garrison, W.E.B. Du Bois, and legendary activist Angela Davis. As Kendi shows, racist ideas did not arise from ignorance or hatred. They were created to justify and rationalize deeply entrenched discriminatory policies and the nation's racial inequities. In shedding light on this history, *Stamped from the Beginning* offers us the tools we need to expose racist thinking. In the process, he gives us reason to hope.
