General Geocryology MIT Press

This book explores how globalisation influences the understanding of law. Adopting a broad concept of law and a global perspective, it critically reviews mainstream Western traditions of academic law and legal theory. Its central thesis is that most processes of so-called 'globalisation' take place at sub-global levels and that a healthy cosmopolitan discipline of law should encompass all levels of social relations and the legal ordering of these relations. It illustrates how the mainstream Western canon of jurisprudence needs to be critically reviewed and extended to take account of other legal traditions and cultures. Written by the one of the foremost scholars in the field, this important work presents an exciting alternative vision of jurisprudence. It challenges the traditional canon of legal theorists and guides the reader through a field undergoing seismic changes in the era of globalisation. This is essential reading for all students of jurisprudence and legal theory.

This book implements several outstanding features which are helpful to the general reader. It is organized in the form of a 'Questions and Answers' guide, an approach unique in the field of astrobology. The questions and answers are linked in a conversation-like style, with each new question following from the previous answer. The book is organized into 20 chapters discussing broad and comprehensive topics, with over 250 questions answered. While the book is written for general readers who are assumed to have an interest in science, though not necessarily an extensive background, it will also be helpful to the beginning student and those who wish to pursue further one or more aspects of the field. It provides the reader with a comprehensive set of 'Further Readings.' After each chapter, resource material is keyed to the individual answers to each question. At the end of the book, full references are given, as well as a guide for how to obtain them. A thorough Index is also provided. The streamlined, condensed, and yet comprehensive approach provided here is well-suited for stimulating the appetite of many readers for delving more into the fascinating and multi-faceted field of astrobology.

Kant's Little Prussian Head and Other Reasons Why I Write: An Autobiography in Essays Cambridge University Press

A timely investigation of the potential economic effects, both realized

and unrealized, of artificial intelligence within the United States healthcare system. In sweeping conversations about the impact of artificial intelligence on many sectors of the economy, healthcare has received relatively little attention. Yet it seems unlikely that an industry that represents nearly one-fifth of the economy could escape the efficiency and cost-driven disruptions of AI. *The Economics of Artificial Intelligence: Health Care Challenges* brings together contributions from health economists, physicians, philosophers, and scholars in law, public health, and machine learning to identify the primary barriers to entry of AI in the healthcare sector. Across original papers and in wide-ranging responses, the contributors analyze barriers of four types: incentives, management, data availability, and regulation. They also suggest that AI has the potential to improve outcomes and lower costs. Understanding both the benefits of and barriers to AI adoption is essential for designing policies that will affect the evolution of the healthcare system.

Computational Complexity Cambridge University Press

A glimpse into a beloved novelist's inner world, shaped by family, art, and literature. In her fiction, Claire Messud "has specialized in creating unusual female characters with ferocious, imaginative inner lives" (Ruth Franklin, *New York Times Magazine*). *Kant's Little Prussian Head and Other Reasons Why I Write* opens a window on Messud's own life: a peripatetic upbringing; a warm, complicated family; and, throughout it all, her devotion to art and literature. In twenty-six intimate, brilliant, and funny essays, Messud reflects on a childhood

move from her Connecticut home to Australia; the complex relationship between her modern Canadian mother and a fiercely single French Catholic aunt; and a trip to Beirut, where her pied-noir father had once lived, while he was dying. She meditates on contemporary classics from Kazuo Ishiguro, Teju Cole, Rachel Cusk, and Valeria Luiselli; examines three facets of Albert Camus and *The Stranger*; and tours her favorite paintings at Boston's Museum of Fine Arts. In the luminous title essay, she explores her drive to write, born of the magic of sharing language and the transformative powers of "a single successful sentence." Together, these essays show the inner workings of a dazzling literary mind. Crafting a vivid portrait of a life in celebration of the power of literature, Messud proves once again "an absolute master storyteller" (Rebecca Carroll, *Los Angeles Times*).

General Jurisprudence Cambridge University Press

Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching

documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

Cambridge IELTS 3 Student's Book with Answers Cambridge University Press

Convex optimization problems arise frequently in many different fields. This book provides a comprehensive introduction to the subject, and shows in detail how such problems can be solved numerically with great efficiency. The book begins with the basic elements of convex sets and functions, and then describes various classes of convex optimization problems. Duality and approximation techniques are then covered, as are statistical estimation techniques. Various geometrical problems are then presented, and there is detailed discussion of unconstrained and constrained minimization problems, and interior-point methods. The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for solving them. It contains many worked examples and homework exercises and will appeal to students, researchers and practitioners in fields such as engineering, computer science, mathematics, statistics, finance and economics.
