This book provides the global mathematics education community with information on the recent and current status of the teaching of mathematics in a group of island nations in the Asia-Pacific region. Sri Lanka, Indonesia, Japan, the Philippines, Australia, Papua New Guinea, New Zealand, and twelve nations in the South Pacific Ocean. It is the third volume in a series conceived by Dr Bruce Vogeli of Columbia University Teachers College and published by WSP, aimed at producing contemporary accounts of mathematics teaching in a world-wide group of nations. Previous volumes have covered Central and South American nations and a selection of Muslim nations respectively.

Information on the educational system of Malaysia and guidelines on the placement of Malaysian students in U.S. high schools and colleges are presented. After a brief introduction on the country and the educational system, attention is directed to preschool, primary, and secondary education. Included are reproductions of certificates of completions and grade reports from different schools, along with information on grading systems. Information is also provided on: pre-university education (higher school, university matriculation programs, and diploma programs); teacher training, including continuing education for school personnel, university education; other tertiary-level education; and nursing, occupational and physical therapy and other allied health programs. Profiles of national universities, polytechnics, and other institutions are included, as are reproductions of sample diplomas and related documents. Guidelines are provided to help admissions officers determine the admissibility and appropriate level of placement of Malaysian students in U.S. institutions. Appended are a glossary and list of acronyms, information on examination subjects for the country's college entrance tests, and lists of Malaysian independent Chinese secondary schools, institutes of agriculture, teacher training colleges, colleges and universities, and a list of occupations requiring vocational training. Chemical Education in the Seventies discusses the major innovations and programs in chemical education from various countries. The book provides a discourse regarding the aspects of chemistry curriculum of primary, secondary, and college level, which includes laboratory work, examination reforms, and training of teachers. The text also discusses information regarding interactions between chemistry and society, such as contributions made by the chemical industry for the education of students at the primary, secondary, and tertiary levels. The selection will appeal to a wide variety of readers, particularly to teachers of general science and chemistry in industrialized and developing countries.
