ONTERIS Abstracts BWV Verlag Educational Assessment in a Time of Reform provides background information on large-scale

examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough. If not, then how can it be improved? The aim of this book is to provide a point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.

"Field trips are a popular method for introducing students to concepts, ideas, and experiences that cannot be provided in a classroom environment. This is particularly true for trans-disciplinary areas of teaching and learning, such as science or environmental education. While field trips are generally viewed by educators as beneficial to teaching and learning, and by students as a cherished alternative to classroom instruction, educational research paints a more complex

picture. At a time when school systems demand proof of the educational value of field trips, large gaps oftentimes exist between field trip theory and practice. Meanwhile, out-of-school educational settings struggle to provide field trip experiences that simultaneously serve multiple, often conflicting objectives and rationales. The author, Senior Researcher at the Institute for Learning Innovation in Annapolis, Maryland, utilizes an in-depth empirical study of teachers and students on environmental field trips and a thorough review of the literature to develop a framework for understanding field trip impacts and learning in out-of-school settings in general: The Integrated Experience Model. The book is useful to scholars, teachers, and educators who are involved with field trips, and to those interested in contextual factors that influence learning in informal or freechoice settings, particularly in the field of environmental science and sustainability education"--EBL.

Roadmap to the Grade 10 MCAS Mathematics Research & Education Assoc. The focus of this volume is on the further development of the Quality of Life Theory and the means to measure the concept. The volume summarizes Michalos' fundamental assumptions about the nature of quality of life or human well-being and explains in detail the two variable theory of the quality of life. It gives an update of the journal Social Indicators Research after forty years, an explanation of the role of community indicators in connecting communities, and a critical review of the much publicized Stiglitz, Sen and Fitoussi report. It deals with the multiple discrepancies theory (MDT), the empirical theory designed to provide the foundation of the pragmatic theory of value. Other concepts discussed in this volume are the stability, sensitivity, and other different features of measures of domain and life satisfaction and happiness, measures of arts-related activities and beliefs, measures of knowledge, attitudes and behaviour concerning sustainable development, and the role of quality of life in sustainable development research. The volume concludes with discussions on connections between social indicators and communities, aspects of community quality of life in Prince George, British Columbia and Jasper, Alberta, and British Columbians' expectations and attitudes going into the third millennium.
