Chilton's Import Car Manual, 1983-1990 Dundurn For courses in managerial economics, this textbook, now in its third edition, is specifically designed for

the students of management, commerce and economics to provide them with a thorough understanding of economic concepts and methodologies and the economic environment influencing managerial decisions. The book first lays a sound theoretical foundation of basic concepts, definitions, and methodologies of economics, being an essential prerequisite for students to understand the theory of managerial economics. The book then moves on to systematically enumerates the various tools of analysis such as demand analysis, cost analysis, elasticity of demand, production analysis and price theory, and highlights their importance in managerial decision making through the concept-example format, wherein a concept discussed is immediately followed by a practical situation so that the

reader can understand its application. The end-of-chapter questions reinforce a deeper understanding of the concepts introduced in the text. An exclusive chapter on linear programming emphasizes the importance of this mathematical tool in finding optimal business solutions. The book concludes with an exhaustive introduction to macroeconomics, analyzing in depth the concepts of inflation, income, savings and investments, and growth and employment in Indian context. The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others?
