The dramatic results of the 2014 European Parliament elections have highlighted the European Union's urgent need for a review of the scope and purpose of its social objectives and for a reordering of European priorities. This book advocates a radical and original alternative to the current philosophy that determines the set of rules for the awarding of EU public procurement contracts. It calls for a reordering of the EU's economic and social priorities. In doing so, it advocates for a social dimension to be placed at the core of public procurement, which could elicit a social model of integration in the EU in which the European citizen is the key actor. This is achieved through an analytical approach as well as concise and contextualised explanations relating to free trade theories, poverty and public interest theories. This book will be of key interest to students and scholars of the European Union, political theory, and EU law.

Symposium on Supersonic Air Transport Kluwer Law International B.V.

This book indicates the shortcomings of the current international legal system and customary international norms that govern international aviation law to comply with contemporary air transport market realities. As the air transport market develops globally, the safety regime of civil aviation should also be governed and applied globally. In this book, the author departs from current international legal norms to examine the emerging legal field of global administrative law. Through that lens, the possibility of reconstructing the set of legal mechanisms that govern domestic and international administrative interaction in the global field of aviation safety is explored. This book demonstrates that a legal system is never complete but always develops in tandem with changing needs, i.e. the participation of the affected parties. Exploring the principles of GAL theory contributes to addressing the contemporary legal issues relating to state compliance with international aviation safety standards that would otherwise not be covered by customary international law. In particular, the principles of GAL theory regarding global governance and the 'public' character of global regulations, the role of individuals and states in global governance, and state sovereignty are considered valuable contributions to contemporary global aviation safety issues in practice. It is asserted in this book that proper checks and balances in global aviation safety can be improved by making these accessible to individuals by way of national courts. Finally, establishing public awareness of global aviation safety standards will eventually create greater pressure on states to implement and enforce them. This book is in an area increasing academic and research interest of

practitioners of public international aviation law, global administrative law, global governance, and global aviation safety, global air transport market regulations.

International Air Transportation Rates, Hearings ..., 88-1 ..., May 15, 16, 20, 1963 Routledge

America is in decline, and the rise of the East suggests a bleak future for the world's only superpower -- so goes the conventional wisdom. But what if the traditional measures of national status are no longer as important as they once were? What if America's well-being was assessed according to entirely different factors? In *The Upside of Down*, Charles Kenny argues that America's so-called decline is only relative to the newfound success of other countries. And there is tremendous upside to life in a wealthier world: Americans can benefit from better choices and cheaper prices offered by schools and hospitals in rising countries, and, without leaving home, avail themselves of the new inventions and products those countries will produce. The key to thriving in this world is to move past the jeremiads about America's deteriorating status and figure out how best to take advantage of its new role in a multipolar world. A refreshing antidote to prophecies of American decline, *The Upside of Down* offers a fresh and highly optimistic look at America's future in a wealthier world.

Facts on File Yearbook Basic Books

After decades of controversy, a unified liability system for international carriage by air was established by the Montreal Convention of 1999, which went into force in November 2003. The new convention replaced the legal labyrinth created by the numerous perplexing accretions that had attached themselves to the Warsaw Convention. In this indispensable volume, air law professionals will find the full English text of the Convention with detailed article-by-article

annotation, including all developments to date in case law, legal literature, national and international legislation, and administrative law. The commentary covers ongoing developments in such crucial aspects as the following: applicability of the Convention; documents for carriage; liability for death or injury of passengers; liability for damages to baggage and cargo and for delay; exoneration from liability; carriage involving a contractual and an actual carrier; time limits for filing a claim and forfeiture; jurisdiction; exclusivity of the Convention versus applicability of national law; and insurance issues. In addition to the article-by-article annotation, the book features such useful information as a synopsis comparing the Warsaw and Montreal Conventions, IATA Conditions and Resolutions, relevant European Union Regulations, and a list of the contracting parties to the Convention. Given that the Montreal Convention ' s application during its first 20 years has already documented a promising and forceful new beginning in the complex area of air transport liability, this incomparable research tool will provide an enormous wealth of information and guidance for anyone who deals with legal issues arising from civil air law, including lawyers, policymakers, insurers and academics.

The Economic Geography of the Tourist Industry explores how tourism is defined and examines whether or not tourism can be conceptualized as an industry. Detailed analyses of key sectors of the travel and tourism industry, such as tour operators, airlines and the hotel industry, are backed by a broad range of international case studies. The book also investigates issues such as business cycles, labour dynamics, entrepreneurship, and the role of the state in tourism and concludes that the production of tourism-related services has characteristics commonly associated with 'harder' production sectors, such as manufacturing and producer services.
