AP® English Literature & Composition Crash Course, For the New 2020 Exam, Book + Online HarperCollins

Despite technology's presence in virtually every public school, its documented familiarity and use by youth outside of school, and the wealth of resources it provides for teaching social studies, there has been relatively little empirical research on its effectiveness for the teaching and learning of social studies. In an

effort to begin to fill this gap in research literature, this book focuses on research on technology in social studies education. The objectives of this volume are threefold: to describe research frameworks, provide examples of empirical research, and chart a course for future research endeavors. Accordingly, the volume is divided into three overarching sections: research constructs and contexts, research reports, and research reviews. The need for research is particularly acute within the field of social studies and technology. As the primary purpose of social studies is to prepare the young people of today to be the citizens of tomorrow, it is necessary to examine how technology tools impact, improve, and otherwise affect teaching and learning in social studies. Given these circumstances, we have prepared this collection of research conceptualizations, reports, and reviews to achieve three goals. 1. Put forward reports on how research is being conducted in the field 2. Present findings from well-designed research studies that provide evidence of how specific applications of technology are affecting teaching and learning in social studies. 3. Showcase reviews of research in social studies It is with this framework that we edited this volume, *Research on Technology and Social Studies Education*, as an effort to address emerging concerns related to theorizing about the field and reporting research in social studies and technology. The book is divided into four sections. The first section of the book includes three descriptions of research constructs and contexts in social studies and technology. The second section is focused on research reports from studies of student learning in social studies with technology. The third section contains research reports on teachers' pedagogical considerations for using technology in social studies. In the fourth and final section, we present work that broadly reviews and critiques research in focused areas of social studies and technology. This volume contains twelve chapters, each of which focuses on social studies content and pedagogy and how the field is affected and enhanced with technology. The volume includes research and theoretical works on various topics, including digital history, digital video, geography, technology use in the K-12 social studies classroom, and artificial intelligence.

Most pre-service education students are enthusiastic about the progressive, constructivist, and student-centered theory and practice advocated in many teacher education programs and by the National Council of Teachers of English. Yet in actual day-to-day practice, teachers often have trouble thinking of ways in which such student-centered and constructivist practices in literacy instruction can be implemented in classrooms which are increasingly driven by high stakes tests, increased accountability, and mandated and even 'teacher proof' scripted curricula. *Teaching Authentic Language Arts in a Test-Driven Era* provides a powerful and much-needed counterargument to the assumption that test-driven curricula preclude meaningful instruction and authentic student engagement within a Language Arts curriculum. Providing teachers with the theoretical stances and pedagogical tools to develop a Language Arts practice which can be personally rewarding as well as beneficial to students, *Teaching Authentic Language Arts in a Test-Driven Era* empowers teachers to be effective even within the confines of a testing- and accountability-driven curriculum.

"WE NEED TO TALK." In this urgent and insightful book, public radio journalist Celeste Headlee shows us how to bridge what divides us--by having real conversations **BASED ON THE TED TALK WITH OVER 10 MILLION VIEWS NPR's Best Books of 2017 Winner of the 2017 Silver Nautilus Award** in

Relationships & Communication "We Need to Talk is an important read for a conversationally-challenged, disconnected age. Headlee is a talented, honest storyteller, and her advice has helped me become a better spouse, friend, and mother." (Jessica Lahey, author of New York Times bestseller *The Gift of Failure*) Today most of us communicate from behind electronic screens, and studies show that Americans feel less connected and more divided than ever before. The blame for some of this disconnect can be attributed to our political landscape, but the erosion of our conversational skills as a society lies with us as individuals. And the only way forward, says Headlee, is to start talking to each other. In *We Need to Talk*, she outlines the strategies that have made her a better conversationalist—and offers simple tools that can improve anyone's communication. For example: **BE THERE OR GO ELSEWHERE**. Human beings are incapable of multitasking, and this is especially true of tasks that involve language. Think you can type up a few emails while on a business call, or hold a conversation with your child while texting your spouse? Think again. **CHECK YOUR BIAS**. The belief that your intelligence protects you from erroneous assumptions can end up making you more vulnerable to them. We all have blind spots that affect the way we view others. Check your bias before you judge someone else. **HIDE YOUR PHONE**. Don't just put down your phone, put it away. New research suggests that the mere presence of a cell phone can negatively impact the quality of a conversation. Whether you're struggling to communicate with your kid's teacher at school, an employee at work, or the people you love the most—Headlee offers smart strategies that can help us all have conversations that matter.

What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based

environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of *Understanding by Design* apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

Updating her highly acclaimed book, Diane Ravitch presents the latest information on the debate over national standards and assessments.

"Ensuring a rigorous liberal education for all is asking a lot in a contentious democracy like ours. Is it possible to educate every child to the same high standards? Is it politically feasible? Will raising standards help or hinder poor minority children? Ravitch sees where these land mines are buried and her book provides an indispensable diagram for getting around them."—The Wall Street Journal "A simple message lies at the heart of Diane Ravitch's new book.... If clear and consistent goals of learning could be set for all American children, rich and poor, gifted and ordinary, then all of these children would end up better educated than they now are likely to be."—The New York Times "No one could be more qualified to write a book about national standards in education than Diane Ravitch."—The Washington Times "The ongoing debate about national education standards and assessment in the U.S. has created as much confusion as it has solutions. What has been needed is an examination of the educational, historical, political, and social issues related to the development of such standards. Ravitch provides such a

Assessing Historical Thinking and Understanding advocates for a fundamental change in how educators think about making sense of learners' developing cognition and understanding in history. Author Bruce VanSledright argues that traditional and typical standardized testing approaches are seldom up to the task of measuring the more complex understandings students are asked to attain, as they cannot fully assess what the student knows. Rather, he points forward along a path toward changes in learning, teaching, and assessing that closely aligns with the Common Core State Standards. He delves into the types of history knowledge the standards require, illustrates how they can be applied in-use in history learning contexts, and theorizes how the standards might fit together cognitively to produce deep historical understandings among students in teaching-learning contexts. By providing a variety of assessment strategies and items that align with the standards, and identifying rich, useful assessment rubrics applicable to the different types of assessments, he offers an important resource for social studies teachers and curriculum writers alike.

Self-assessment leads to stronger performance in the nation's colleges and universities. That's the premise of "Excellence in Higher Education," a model self-assessment program that has earned accolades from the higher education community. Based on the Malcolm Baldrige National Quality Award framework, the fourth edition of this bestseller is the definitive tool for college and university administrators in defining mission, assessing stakeholders, measuring outcomes, gauging performance against other institutions, and ensuring continuous improvement. The new "EHE" provides a framework that integrates the Baldrige criteria with the standards and language developed and used by accrediting associations. The book provides

facilitators with a solid understanding of the "EHE" model, providing detailed guidance in each of seven areas: (1) leadership; (2) strategic planning; (3) beneficiaries and constituencies; (4) programs and services; (5) faculty, staff, and workplace; (6) assessment and information use; and (7) outcomes and achievements. The "Workbook and Scoring Guide" and Facilitator's Guide CD-ROM both include generously illustrated PowerPoint presentations for use in facilitating workshops. The scoring guidelines will help readers interpret results and gauge their institution's performance. Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom.

Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

This book is open access under a CC BY-NC 2.5 license.?? This book describes the extensive contributions made toward the advancement of human assessment by scientists from one of the world's leading research

institutions, Educational Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis and evaluation, scientific psychology, and validity. Many of the developments presented have become de-facto standards in educational and psychological measurement, including in item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of international Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS) and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of contributions to the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology, and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and education policy analysis. Opening with a chapter on the genesis of ETS and closing with a synthesis of the enormously diverse set of contributions made over its 70-year history, the book is a useful resource for all interested in the improvement of human assessment.
