This research handbook provides higher education administrators, student affairs personnel, institutional researchers, and faculty with an integrated volume of theory, method, and application. Cracking the AP Statistics Exam Social Science Education consortium Despite technology's presence in virtually

every public school, its documented familiarity and use by youth outside of school, and the wealth of resources it provides for teaching social studies, there has been relatively little empirical research on its effectiveness for the teaching and learning of social studies. In an effort to begin to fill this gap in research literature, this book focuses on research on technology in social studies education. The objectives of this volume are threefold: to describe research frameworks, provide examples of empirical research, and chart a course for future research endeavors. Accordingly, the volume is divided into three overarching sections: research

constructs and contexts, research reports, and research reviews. The need for research is particularly acute within the field of social studies and technology. As the primary purpose of social studies is to prepare the young people of today to be the citizens of tomorrow, it is necessary to examine how technology tools impact, improve, and otherwise affect teaching and learning in social studies. Given these circumstances, we have prepared this collection of research conceptualizations, reports, and reviews to achieve three goals. 1. Put forward reports on how research is being conducted in the field 2. Present findings from well-

---

designed research studies that provide evidence of how specific applications of technology are affecting teaching and learning in social studies. 3. Showcase reviews of research in social studies It is with this framework that we edited this volume, *Research on Technology and Social Studies Education*, as an effort to address emerging concerns related to theorizing about the field and reporting research in social studies and technology. The book is divided into four sections. The first section of the book includes three descriptions of research constructs and contexts in social studies and technology. The second section is

focused on research reports from studies of student learning in social studies with technology. The third section contains research reports on teachers' pedagogical considerations for using technology in social studies. In the fourth and final section, we present work that broadly reviews and critiques research in focused areas of social studies and technology. This volume contains twelve chapters, each of which focuses on social studies content and pedagogy and how the field is affected and enhanced with technology. The volume includes research and theoretical works on various topics, including digital history, digital video, geography,

technology use in the K-12 social studies classroom, and artificial intelligence. Most pre-service education students are enthusiastic about the progressive, constructivist, and student-centered theory and practice advocated in many teacher education programs and by the National Council of Teachers of English. Yet in actual day-to-day practice, teachers often have trouble thinking of ways in which such student-centered and constructivist practices in literacy instruction can be

implemented in classrooms which are increasingly driven by high stakes tests, increased accountability, and mandated and even 'teacher proof' scripted curricula. Teaching Authentic Language Arts in a Test-Driven Era provides a powerful and much-needed counterargument to the assumption that test-driven curricula preclude meaningful instruction and authentic student engagement within a Language Arts curriculum.

---

Providing teachers with the theoretical stances and pedagogical tools to develop a Language Arts practice which can be personally rewarding as well as beneficial to students, Teaching Authentic Language Arts in a Test-Driven Era empowers teachers to be effective even within the confines of a testing- and accountability-driven curriculum.

College education is one of the most important investments a family will make. But between the

viewbooks, websites, insider gossip, and magazine rankings, students and their worried parents face a dizzying array of options. What do the rankings really mean? Is it wise to choose the most prestigious school a student can get into? What are the payoffs of higher education, and, by the way, how do we pay for them? In a unique approach to these conundrums, an economist and award-winning teacher walks readers through the opportunities, risks, and rewards of heading off to college. Warning against the pitfalls of numerical rankings, Malcolm Getz poses

questions to guide a student toward not necessarily the best college but the right one. Famous professors suggest quality--but do they teach undergraduates? Are smaller classes always better? When is a state university the best deal around? In a concise overview of decades of research, Getz reviews findings on the long-term returns of college education in different careers, from law to engineering, from nursing to financial management. Sorting through personal, professional, and institutional variables, he helps

families determine when paying \$40,000 a year might make sense, and when it merely buys an expensive rear window decal. He breaks down the formidable admissions game into strategies to improve the odds of acceptance, and he offers tips on tax breaks, subsidized loans, federal grants, 529 accounts, merit scholarships, and much more. Shrewd and sensible, *Investing in College* is an invaluable resource and a beacon of sanity for college-bound students and the families who support them. Princeton Review AP Statistics Prep

Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis and evaluation, scientific psychology, and validity. Many of the developments presented have become de-facto standards in educational and psychological measurement, including in item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of international Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS) and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology, and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and education policy analysis. classroom. Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. Developing Assessments for the

---

Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making

sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

There have been many important changes in the participation of women and men in American society over the past quarter-century. Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men. They aid the learning process and reflect inequalities in opportunity to learn and participate. In addition, they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students, educational programs, and a wide

range of issues. For all of these reasons, it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired. The test performance of women and men is a research topic of historical interest and has received much attention in recent years. Because of this increased interest, there is a great deal of new research and data available. The purpose of the study presented in this volume was to review this new information with two objectives in mind: \*to clarify patterns of gender difference and similarity in test performance and related achievements, and \*to see what implications those findings might have

for fair assessment and, as a corollary, examine the assessment process as a possible source of gender differences. This study is interested in tests used in education to assess developed knowledge and skill. In order to gain a broader view of gender similarity and difference, the contributors looked at other types of measures and other characteristics of young women and men. Their hope is to contribute to a firmer basis for insuring fairness in tests--an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience.
