Executive functions are a set of cognitive processes we use to act on information, manage resources, and plan and monitor our own behaviour, all with the aim of achieving an end goal. These are skills that develop from infancy. While 'reading' has been extensively studied in psychology literature, 'writing' has been somewhat neglected, despite a lack of capability in this area being linked to poverty and social exclusion. This book is the first comprehensive and state-of- the-art review of the relationship between executive function skills and writing. It explores its role across the lifespan, addressing all groups of writers, from children and those with learning and language difficulties, to adults and elders. It considers theoretical viewpoints, assessment and methodological issues, and developmental disorders, and closes with insightful commentary chapters that draw future directions for investigating executive functions. Written by internationally recognized scholars in the field, this is a new and innovative contribution which will provide essential reading among researchers, educators, and graduate students interested in understanding the cognitive underpinnings of writing throughout the lifespan

An Analysis of the Information Technology Standardization Process Bloomsbury Publishing
A number of important issues form the basis of this book: How can the Information Technology (IT) standardization process, leading to unified products which are needed on the market, be made more efficient? Which current IT standards are of high quality, what factors have led to that high quality, and can those factors be re-created for other IT standards? What improvements to the quality of IT standards are needed? Which organizations should be involved? What permanent changes in the IT standardization scene are necessary? At what point in the evolution of a technology is it appropriate to produce standards? Is strategic planning feasible in the current standardization approach? Diverse disciplines contributed to the findings in this book: computer scientists, standardization leaders and professionals, users and vendors, economists, auditors, software implementors,

and communication specialists.

On the Write Track puts teachers' autonomy and their knowledge of what is right for their pupils at the heart of teaching writing. It explores a set of research-based principles, before illustrating these with case studies and examples of classroom practice. Writing is about communication. Learning to write gives children a voice that others will listen to – a voice they can use to share their ideas, articulate their feelings, amuse and delight their readers and argue for what they believe in. While every child, every teacher and every classroom are different, approaches to teaching writing can sometimes feel prescriptive, whether they are based on a particular curriculum model, commercial scheme, assessment system or underlying philosophy. This book provides freedom and choice by introducing a series of 'tracks' for writing teaching, including practical approaches to: Building a

community of writers in the classroom Employing a process-led sequence for teaching writing Encouraging children to write for pleasure and share their own interests Exploring the use of rich and diverse texts as fuel for writing Drawing on spoken language and oracy to develop written communication Teaching grammar and punctuation to support writing Utilising feedback to help children develop their writing voice Using drama and play as starting points for writing Through considering these different tracks and thinking about how to weave them together into a coherent whole, teachers can help every child to make the journey to being a confident, skilled, keen writer.

Why Do Linguistics? BoD – Books on Demand
This book provides a unique analysis and description of the linguistic challenges faced by school students as they move from primary to secondary school, a major transition, which some students struggle with emotionally and academically. The study: • draws on a bespoke corpus of 2.5 million words of written materials and transcribed classroom recordings, provided by the project's partner schools; • combines quantitative and qualitative approaches to the corpus data to explore linguistic variation across school levels, registers and subjects; • describes the procedures of corpus compilation and analysis of written and spoken academic language, showing how modern corpus tools can be applied to this far-reaching social and educational issue; • uncovers differences and similarities between the academic language that school children are exposed to at primary and secondary school, contrasting this against the backdrop of the non-academic language that they encounter outside school. This book is important reading for advanced students and researchers in corpus linguistics, applied linguistics and teacher education. It carries implications for policymakers and schools looking to support students at this critical point in their schooling.

Microsatellite or so-called simple sequence repeat (SSR) markers have been one of the most reliable molecular markers derived from the DNA molecule, which were widely and successfully used for more than 25 years in the genetic studies of environmental, agricultural, and biomedical sciences. The objective of this Microsatellite Markers book is to rehighlight and provide some updates on previous and recent utilization of microsatellite markers for various applications in agriculture and medicine, which void emerging opinion on "full death" of microsatellites as useful genetic markers. Chapters presented here demonstrate the future benefit of SSRs in many genetic studies as well as disease diagnosis and prognosis.
