Few things ignite such reverence as a classic car. With more than 250 iconic models from the 1940s to the 1980s, photographed from every angle, this title is a glorious celebration of the stars in the classic car firmament. Edited by award-winning automotive journalist Giles Chapman, Classic Car brings you the story of more than 20 great marques, including household names Bentley, Mercedes, Ferrari, Cadillac, and Aston Martin. Its lavish photography reveals every detail in close-ups of models that range from the 1940s giant two-ton

Daimler DE36, which ferried royals about in style, through to sleek Ferraris from the 1980s capable of smashing the 200mph barrier. It puts you in the driving seat of such icons as the Chevrolet Corvette, the Ford Thunderbird, and the Mercedes 300SL and brings you the designers of these amazing machines and the story of their manufacturers. Whether you dream of owning one of these super-cool cars or you are a collector already, Classic Car is set to become a treasured favorite.

Chrysler entered the pony-car market with the capable but unlovely Barracuda in the early 1960s. The car was refined over the years, becoming a true muscle car, and a rather handsome one at that, but it wasn't until the advent of the E-body pony cars from 1970-1974—Barracuda s, the Dodge Challenger, and Plymouth 'Cuda—that Chrysler became a true player in the pony-car market. This book tells the story of Chrysler's pony car series, from the advent of the original Barracuda in 1964 to the final days of the smog-motored Challengers and 'Cudas of the

mid-1970s, focusing on the series' heyday in the early 1970s.

VW Golf, GTI, Jetta and Cabrio, 1999 Thru 2002

This book reports on innovative research and developments in the broad field of transportation. It covers solutions relating to intelligent vehicles and infrastructure, energy and combustion management, vehicle dynamics and engineering, as well as research on railway transport, aerospace technologies, logistics and security.

Contributions are based on peer-reviewed papers presented at the 13th international scientific conference "Transbaltica: Transportation Science and Technology", held on September 15-16, 2022, at Vilnius Gediminas Technical University, in Vilnius, Lithuania. All in all, this book offers extensive information on modern transport systems, with a good balance of theory and practice.

Since the introduction of Automated Vehicles (AVs) on roads, there have been a number of high-profile collisions, which have highlighted significant driver challenges. These include challenges associated with drivers' trust in the automation, their knowledge and awareness of the AV's capabilities and limitations and their reduced situation awareness of the road environment and the vehicle. Solutions are needed to overcome these challenges, so that the expected benefits of AVs can be realised. Driver

Training for Automated Vehicles: A Systems Approach identifies the training requirements for drivers of AVs and takes a systematic approach to design, develop, implement and evaluate a comprehensive training package to address these requirements. This book explores how training can overcome the driver challenges associated with AVs by improving drivers' mental models, trust in automation, decisions and behaviour when activating a Level 4 AV. It presents a systematic approach to the training lifecycle, by first presenting the current state of research into AVs, identifying the challenges and training requirements for drivers of AVs, and then developing and evaluating a training programme to achieve these requirements. This fascinating title highlights the need for drivers to undergo training for AVs, and takes us a step closer to this need. It walks readers through a systematic, four-step process and provides practical guidance to develop and evaluate an effective training programme. The reader will develop a thorough understanding of the current driver challenges with AVs and the methods and systems to mitigate them through current knowledge and research. This book is an ideal read for practitioners, designers and academics with a professional or research interest in AVs. Its appeal extends to those in the fields of automotive design, Systems Engineering, Human Factors and education and training.
