Genesis to Revelation: 1 and 2 Kings, 1 and 2 Chronicles Leader Guide Lippincott Williams & Wilkins

Violence on the streets. Military expansion. Consumerism. Policies exploiting people and natural resources. Harassment and abuse: 1 & 2 Kings could hardly be more relevant. In the thirty-fourth volume of the Believers Church Bible Commentary series, Old Testament scholar Lynn Jost claims 1 & 2 Kings were written to form a community that would embrace the Ten Commandments and the Great Shema and would champion righteousness and compassion. Jost traces the characteristics of royal justice, with its systems of excess and indulgence, as well as the court intrigue, succession politics, interfamily rivalries, and prophetic judgment that mark the books. Through it all, Israel remains in a covenant relationship with a delivering God. Through it all, God calls the leaders and the people to practice justice, protect shalom, and live righteously. In vivid and accessible prose, Jost invites pastors, scholars, and lay readers to read 1 & 2 Kings as books of promise—ones that gesture toward a faithful God who rescues, judges, commands, and provides. About the Believers Church Bible

Commentary series This readable commentary series is for all who seek more fully to understand the original message of Scripture and its meaning for today—Sunday school teachers, members of Bible study groups, students, pastors, and other seekers. —From the Series Foreword

Information and communication technologies are advancing fast. Processing speed is still increasing at a high rate, followed by advances in digital storage technology, which double storage capacity every year. Furthermore, communication technologies do not lag behind. The Internet has been widely used, as well as wireless technologies. With a few mouse clicks, people can communicate with each other around the world. All these advances have great potential to change the way people live, introducing new concepts like ubiquitous computing and ambient intelligence. Technology is becoming present everywhere in the form of smart and sensitive computing devices. They are nonintrusive, transparent and hidden in the background, but they collect, process, and

share all kinds of information, including user behavior, in order to act in an intelligent and adaptive way. These emerging technologies put new requirements on security and data management. As data are accessible anytime anywhere, it becomes much easier to get unauthorized data access. Furthermore, the use of new technologies has brought about some privacy concerns. It becomes simpler to collect, store, and search personal information, thereby endangering people's privacy. Therefore, research in secure data management is gaining importance, attracting the attention of both the data management and the security research communities. The interesting problems range from traditional topics, such as, access control and general database security, via privacy protection to new research directions, such as cryptographically enforced access control.
