ANN LIEBERMAN Carnegie Foundation for the Advancement of Teaching, Stanford, CA, U.S.A. MICHAEL FULLAN Ontario Institute for Studies in Education, University of Toronto, Canada DAVID HOPKINS Department for Education and Skills, London, U.K. This set of four volumes on Educational Change brings together evidence and insights on educational change issues from leading writers and researchers in the field from across the world. Many of these writers, whose chapters have been specially written for these books, have been investigating, helping initiate and implementing educational change, for most or all of their lengthy careers. Others are working on the cutting edge of theory and practice in educational change, taking the field in new or even more challenging directions. And some are more skeptical about the literature of educational change and the assumptions on which it rests. They help us to approach projects of understanding or initiating educational change more deeply, reflectively and realistically. Educational change and reform have rarely had so much prominence within public policy, in so many different places. Educational change is ubiquitous. It figures large in Presidential and Prime Ministerial speeches. It is at or near the top of many National policy agendas. Everywhere, educational change is not

only a policy priority but also major public news. Yet action to bring about educational change usually exceeds people's understanding of how to do so effectively.

Graduates face a world of complexity which demands flexibility, adaptability, self-reliance and innovation, but while the development of creativity is embedded in the English National Curriculum and in workplace training, the higher education sector has yet to fully recognise its importance. This book highlights how pressures such as quality assurance, peer review systems, demands for greater efficiency and increased research output are effectively discouraging innovation and creativity in higher education. It makes a bold case for the integration of creativity in higher education, drawing together contributors and research from around the world and explores valuable lessons learnt from those working in schools and professional organisations. Shift happens: Emerging technologies and globalization have resulted in political, social and cultural changes. These changes have a profound impact on all aspects of human life, including education. Yet while society has changed and continues to change, schools are slow to keep up. This book explores issues related to transforming and modernizing our educational systems, including the impact of societal shifts on education, the efforts at various levels to bring schools into the 21st century, the identification of 21st century skills, the reformation of the curriculum, the creation of alternative models of schooling, the innovative use of technology in education, and many others. It addresses questions like the following: Should schools systems adapt to better meet the needs of tomorrow ' s world and how should this be accomplished? How can society better prepare students for a changing and challenging modern world? What skills do students need to lead successful lives and become productive citizens in the 21st century? How can educators create learning environments that are relevant and meaningful for digital natives? How can the school curriculum be made more rigorous to meet the needs of the 21st century? This book encourages readers to transcend the limits of their own educational experience, to think beyond familiar notions of schooling, instruction and curriculum, to consider how to best structure learning so that it will benefit future generations. It encourages a deeper analysis of the existing education system and offers practical insights into future directions focused on preparing students with 21st century skills.

In this fascinating book, the author of The Hinge Factor and The Weather Factor surveys revolutions across the centuries, vividly portraying the people and events that brought wrenching, often enduring and always bloody change to countries and societies almost overnight. Durschmied begins with the French Revolution and goes on to examine the revolutions of

Mexico in 1910, Russia in 1917, and Japan in 1945, as well as the failed putsch against Hitler in 1944. His account of the Cuban Revolution is peppered with personal anecdotes for he was the first foreign correspondent to meet Castro when the future leader was still in the Sierra Maestra. He concludes with the Iranian Revolution that ousted the Shah in 1979 another that he personally covered and, in a new preface, extends his analysis to the Arab Spring.Each revolution, Durschmied contends, has its own dynamic and memorable cast of characters, but all too often the end result is the same: mayhem, betrayal, glory, and death. Unlike the American Revolution, which is the counterexample, few revolutions are spared the harsh reality that most devour their own children. Durschmied is a supremely gifted reporter who has transformed the media he works in. Newsweek A] light and lively narrative that serves as a useful introduction for the general reader. Progressive Education, derived mainly from Anglo-American culture, has been the primary frame of reference for student-centered classroom change in developing countries for over 50 years. Yet in many developing countries, strong evidence shows that progressivism has not replaced teacher-centered formalistic classroom practice. Classroom Change in Developing Countries: From Progressive Cage to Formalistic Frame presents a robust case for why formalism should be the primary frame of reference for upgrading classroom teaching in developing countries. Theoretically rich yet grounded in practice, the book draws on case studies from Africa, China and Papua New Guinea to show how culturally intuitive formalistic teaching styles can induce positive classroom change. Synthesising research and evaluation literature on classroom change in developing countries, Guthrie examines some of the methodological flaws in the literature. The book considers the progressive cage, and looks at Confucian influences on teaching in China, progressive reform failures in both Sub-Saharan Africa and Papua

New Guinea, as well as offering a critical take on some failings in comparative education. It examines the formalistic frame, addresses methodological issues in culturally grounded research and offers a model of teaching styles for basic classroom research. The book concludes by returning the focus back to teachers and considers the so-called teacher resistance to change. The book will be an essential purchase for academics and research students engaged in the fields of classroom teaching, teacher education and curriculum and will also be of interest to academics, aid officials, and decision-makers in developing countries.

Japan is rightly regarded as one of the most technologically advanced countries in the world, yet the development and deployment of Internet technology in Japan has taken a different trajectory compared with Western nations. This is the first book to look at the specific dynamics of Japanese Internet use. It examines the crucial questions: * how the Japanese are using the Internet: from the prevalence of access via portable devices, to the fashion culture of mobile phones * how Japan's "cute culture" has colonized cyberspace * the role of the Internet in different musical subcultures * how different men's and women's groups have embraced technology to highlight problems of harassment and bullying * the social, cultural and political impacts of the Internet on Japanese society * how marginalized groups in Japanese society - gay men, those living with AIDS, members of new religious groups and Japan's hereditary sub-caste, the Burakumin - are challenging the mainstream by using the Internet. Examined from a variety of interdisciplinary perspectives, using a broad range of case-studies, this is an exciting and genuinely cutting-edge book which breaks new ground in Japanese studies and will be of value to anyone interested in Japanese culture, the Internet and cyberculture.
