Are current testing practices consistent with the goals of the reform movement in school mathematics? If not, what are the alternatives? How can authentic performance in mathematics be assessed? These and similar questions about tests and their uses have forced those advocating change to examine the way in which mathematical performance data is gathered and used in American schools. This book provides recent views on the issues surrounding mathematics tests, such as the need for valid performance data, the implications of the Curriculum and Evaluation Standards for School Mathematics for test development, the identification of valid items and tests in terms of the Standards, the procedures now being used to construct a sample of state assessment tests, gender differences in test taking, and methods of reporting student achievement.

This timely and challenging analysis combines theoretical and data analysis and insights gained from running a university, to give robust new policy proposals: lower fees; reintroduce maintenance awards; impose student number caps; maintain taxpayer funding; cancel the TEF; re-build the external examiner system; restructure the contingent-repayment loan scheme; and establish different roles for different types of institutions, to encourage excellence and ultimately benefit society.
