The Huntley Project Motorbooks
This book covers the various advanced reciprocating combustion engine technologies that utilize natural gas and alternative fuels for transportation and power generation applications. It is divided into three major sections

consisting of both fundamental and applied technologies to identify (but not limited to) clean, high-efficiency opportunities with natural gas fueling that have been developed through experimental protocols, numerical and high-performance computational simulations, and zero-dimensional, multizone combustion simulations. Particular emphasis is placed on statutes to monitor fine particulate emissions from tailpipe of engines operating on natural gas and alternative fuels.

Suspect Citizens offers the most comprehensive

look to date at the most common form of police-citizen interactions, the routine traffic stop. Throughout the war on crime, police agencies have used traffic stops to search drivers suspected of carrying contraband. From the beginning, police agencies made it clear that very large numbers of police stops would have to occur before an officer might interdict a significant drug shipment. Unstated in that calculation was that many Americans would be subjected to police investigations so that a small number of high-level offenders might be found. The key element in this strategy, which kept it hidden from widespread public scrutiny, was that middle-class white Americans were largely exempt from its consequences. Tracking these police practices down to the officer level, Suspect Citizens documents the extreme rarity of drug busts and reveals sustained and troubling disparities in how

racial groups are treated.

The transition to computer-based technologies and file-based workflows is

one of the most significant changes the broadcast and production industry has seen. Media is produced for multiple delivery platforms: Over the Air, Over the Top, large screen displays, cable, satellite, web, digital signage, tablets, and smartphones. These changes impact all aspects of creation, production, media management, technical operations, business processes, and distribution to end users. Of all the books and papers discussing storage mapping, packet transport, and compression algorithms, none puts all the pieces together and explains where these fit into the whole environment. *Planning and Designing the IP Broadcast Facility* is the first to provide a comprehensive understanding of the technology architecture, physical facility

changes, and—most importantly—the new media management workflows and business processes to support the entire lifecycle of the IP broadcast facility from an engineering and workflow perspective. Key features: This beginning-to-end perspective gives you the necessary knowledge to make the decisions to implement a cost-effective file-based production and distribution system. The cohesive, big-picture viewpoint helps you identify the differences in a tape-based facility, then how to overcome the unique challenges of upgrading your plant. Case studies throughout the book serve as recommendations and examples of use, helping you weigh the pros and cons of various approaches.

Real-Time System Management Information Program (US Federal Highway Administration Regulation) (FHWA) (2018 Edition) The Law Library presents the complete text of the Real-Time System Management Information Program (US

Federal Highway Administration Regulation) (FHWA) (2018 Edition). Updated as of May 29, 2018 Section 1201 of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) requires the Secretary of Transportation (Secretary) to establish a Real-Time System Management Information Program that provides, in all States, the capability to monitor, in real-time, the traffic and travel conditions of the major highways of the United States and to share that data with State and local governments and with the traveling public. This proposed rule would establish minimum parameters and requirements for States to make available and share traffic and travel conditions information via real-

time information programs. This book contains: - The complete text of the Real-Time System Management Information Program (US Federal Highway Administration Regulation) (FHWA) (2018 Edition) - A table of contents with the page number of each section

Learn how to program with Kotlin! Kotlin is the exciting modern language from JetBrains, creators of IntelliJ IDEA, the basis of many popular IDEs such as Android Studio and PyCharm. Since the adoption of Kotlin by Google as an official language for Android, the momentum behind Kotlin has gone off the charts. Kotlin supports many platforms, including Android, the web, the back-end, and even iOS. By reading this book, you'll be ready to use Kotlin on any and all of these platforms. Who This Book Is For This book is for complete beginners to Kotlin. No prior programming experience is necessary! Topics Covered in Kotlin Apprentice Kotlin Development Environment: See how to setup a development environment for Kotlin using

IntelliJ IDEA. Numbers and Strings: These are the basic kinds of data in any app-learn how to use them in Kotlin. Making Decisions: Your code doesn't always run straight through-learn how to use conditions and loops to control program flow. Functions and Lambdas: Group your code together into reusable chunks to run and pass around. Collection Types: Discover the many ways Kotlin offers to store and organize data into collections. Building Your Own Types: Learn how to model elements in your app using classes, objects, interfaces, and enumerations. Functional Programming: Learn how to use Kotlin in a functional style and how this can make your code clearer and more efficient. Coroutines: Asynchronous programming can be a complex topic on any platform, but Kotlin gives you a clear and concise approach with coroutines. Kotlin Platforms and Scripting: Learn about how Kotlin can be used on multiple platforms and see its use as a scripting language. Kotlin/Native and Multiplatform: See how to use Kotlin/Native to bring your apps to more than one platform. One thing you can count on: after reading this book, you'll be prepared to take advantage of Kotlin wherever you choose to use it!

This contributed volume contains the results of the research program “Agreement for Hybrid and Electric Vehicles”, developed in the framework of the Energy Technology Network of the International Energy Agency. The topical focus lies on technology options for the system optimization

of hybrid and electric vehicle components and drive train configurations which enhance the energy efficiency of the vehicle. The approach to the topic is genuinely interdisciplinary, covering insights from fields. The target audience primarily comprises researchers and industry experts in the field of automotive engineering, but the book may also be beneficial for graduate students.
