"This research should make us extremely sceptical that the constant search for 'higher standards' and for ever-increasing achievement scores can do much more than put in place seemingly neutral devices for restratification." - Michael W Apple, John Bascom
Professor of Curriculum and Instruction and Educational Policy Studies, University of Wisconsin, Madison
Recent educational reforms have raised standards of achievement but have also

resulted in growing inequalities based on 'race' and social class. School-by-school 'league tables' play a central role in the reforms. These have created an A-to-C economy where schools and teachers are judged on the proportion of students attaining five or more grades at levels A-to-C. To satisfy these demands schools are embracing new and ever more selective attempts to identify 'ability'. Their assumptions and practices embody a new IQism: a simple, narrow and regressive ideology of intelligence that labels working class and minority students as likely failures and justifies rationing provision to support those (often white, middle class boys) already marked for success. This book reports detailed research in two secondary schools showing the real costs of reform in terms of the pressures on teachers and the rationing of educational opportunity. It will be important reading for any teacher, researcher or policymaker with an interest in equality in education.

This book is for all those taking the Masters in Teaching and Learning (MTL). The contents reflect the units of this new

qualification, building on Initial Teacher Training, deepening and broadening professional understanding and skills while addressing individual teacher needs. Chapters cover core topics such as developing pedagogy, assessment for learning, special educational needs and behaviour. The book provides invaluable support for beginning teachers as they manage their professionally based, postgraduate learning, including guidance on critical thinking, reflective practice and research skills, and is clearly linked to the newly developed framework of Professional Standards for Teachers.

As the yearbook of the Institute of Contemporary British History, the Annual Review covers every aspect of contemporary Britain. Comprising an analysis of 1994 and a record of developments and policy, Contemporary Britain is an indispensable tool for contemporary historians, researchers and librarians. The changing state of government, politics, the economy and society are examined, and the introduction critically evaluates current developments in recent British history and changes in the world in general. The review contains 39 survey essays covering different aspects of the contemporary scene, written by experts drawn from academic life and political journalism.

These essays both interpret and review relevant legislation, reports, initiatives, speeches and events of the past year.

Lecturers - request an e-inspection copy of this text or contact your local SAGE representative to discuss your course needs. Watch Andy Field's introductory video to Discovering Statistics Using R Keeping the uniquely humorous and self-deprecating style that has made students across the world fall in love with Andy Field's books, Discovering Statistics Using R takes students on a journey of statistical discovery using R, a free, flexible and dynamically changing software tool for data analysis that is becoming increasingly popular across the social and behavioural sciences throughout the world. The journey begins by explaining basic statistical and research concepts before a guided tour of the R software environment. Next you discover the importance of exploring and graphing data, before moving onto statistical tests that are the foundations of the rest of the book (for example correlation and regression).

You will then stride confidently into intermediate level analyses such as ANOVA, before ending your journey with advanced techniques such as MANOVA and multilevel models. Although there is enough theory to help you gain the necessary conceptual understanding of what you're doing, the emphasis is on applying what you learn to playful and real-world examples that should make the experience more fun than you might expect. Like its sister textbooks, *Discovering Statistics Using R* is written in an irreverent style and follows the same groundbreaking structure and pedagogical approach. The core material is augmented by a cast of characters to help the reader on their way, together with hundreds of examples, self-assessment tests to consolidate knowledge, and additional website material for those wanting to learn more. Given this book's accessibility, fun spirit, and use of bizarre real-world research it should be essential for anyone wanting to learn about statistics using the freely-available R software.

This book provides exemplars of some of the major forms taken by contemporary educational research, both qualitative and quantitative, illustrating their strengths and weaknesses. Education has always been a politically

highly charged topic, perhaps never more so than at present, and the articles have been chosen to reflect this: the new vocationalism, the deprofessionalisation of teachers, ethnicity, league tables and the relationship between research and the political impact of research, are all represented in the collection. This is the companion volume to Educational Research: Current Issues edited by Martyn Hammersley. It is one of two course readers for The Open University course E824 Educational Research Metho
