This course covers aspects like

HSE, Process, Mechanical, Electrical and Instrumentation & Control that will enable you to apply for any position in the Oil and Gas Industry.

Transportation Energy Data

Book Petrogav International Six volumes bound under one cover make this the most comprehensive book ever written on alcohol fuel production, use, policy, history, ecology, politics and economic perspectives. Thoroughly addresses both past and present controversies, myths and misconceptions that permeate the public debate. It contains the most exhaustive treatment of potential energy crops to be found anywhere. Crops for all climates and soil types are detailed including cellulosic materials. Unique feedstocks that can have global impact like ocean kelp, cattails used for treating sewage, and creative waste products are covered. Design and construction

of alcohol plants from 2 gallons per hour to 50 gallons per hour including detailed distillery design data is described in laymen's terms for easy construction. Case histories of actual plants are covered in interviews of operations built by the author's students. The book compares qualities of alcohol versus gasoline and diesel. In exceptional detail, conversion of gasoline, diesel, aircraft, motorcycle, two stroke, and utility engines are described. Using alcohol to produce electricity and hot water as well as cooking and cooling are also addressed. Business models for micro and small plants are laid out enabling the reader to design their own business. The author's original concept of Community Supported Energy projects in which communities establish driver owned alcohol stations and then contract with farmers to supply the station are outlined clearly so activists can organize them. Profusely illustrated with 514 charts, photos and drawings. The book is thoroughly documented with 473 endnotes

and a 6300 entry index.

Torque Lexington Books
Buying a car is a personal choice that has become a more complex decision because of advances in technology, and reliability issues that are haunting some car makers. Many consumers look to Zack Spencer, the host of Driving Television, for straightforward, no-nonsense, expert advice. In Motormouth, you will find out which vehicles are the safest, most reliable, and best value for your hard-earned dollar. In an easy-to-understand format, you will get: Fuel economy ratings Pros and cons for performance, handling, comfort, and ease-of-use Standard safety features J.D. Over the past forty years, state/provincial and local governments in the United States and Canada have provided foreign automakers with approximately \$4.80 billion in incentives in order to lure light vehicles assembly plants to their areas. This has included tax abatements, infrastructure construction, land giveaways, job training programs, and other subsidies. As of early 2015, ten foreign vehicle makers operated 20 light vehicles in developed North America. Despite the fact that all ten of

these automakers have pursued a similar pattern—first exporting vehicles into the United States and Canada before launching vehicle plants in developed North America—each has followed its own specific historical development path and has created its own unique growth trajectory. This book provides a unique historical and qualitative review of these ten vehicle makers, from their early beginnings to their export entry into the United States and/or Canada through early 2015. In addition, it chronicles the histories of more than a dozen former automakers and potential future foreign light motor vehicle assembly plants in the United States and Canada. This includes the

first foreign automaker to build its cars in the United States, De Dion-Bouton of France in July 1900, the early 20th Century endeavors of Fiat, Mercedes, and Rolls Royce, and the present day hopes of Chinese and Indian automakers. In the process, the text also provides an assessment of the top competing states and sites for any future plants, the possible incentives packages governments may offer to attract such facilities, and an estimated incentive value for each automaker. Overall, the goal of this book is to expand the knowledge of policymakers at all tiers of government in the United States and Canada and to help them take a more holistic look at the pros and cons of

attracting Automobile Manufacturing FDI. It is hoped that this will enable them to make more informed decisions when pursuing a new foreign motor vehicle assembly plant. Its findings should also prove informative to urban and regional planning, political science, sociology, economics, labor, and international development scholars and students in North America and worldwide.
