The global automotive industry faces the most influential changes since the revolutionary introduction of mass production a century ago. Latecomer firms from Asia are challenging the western incumbents. They can change the rules of the

game in the industry by leapfrogging several steps in their development process. This study seeks to contribute to the discussion of latecomer firms by gaining insights into the catch up processes of five automotive companies in the passenger car segment, namely BYD (PRC), Chery (PRC), Geely (PRC), Tata Motors (India) and Mahindra & Mahindra

(India). Based on learning theories and the core processes of car manufacturers, the author develops a catch up framework in order to compare automotive latecomers. The Korean manufacturer Hyundai serves as an example for a successful catch up, and provides a contextual framing for catch up processes in the automotive sector. An

analysis of empirical data provides evidence for the evaluation of the catch up status of the five challenger firms. The author emphasizes the influence of institutional settings in China and India and the role of business groups that can act as facilitators for the catch up process. Finally, the study clusters the catch up

strategies of the five observed companies in order to compare their approach.

Lemon-Aid New and Used Cars and Trucks 2007 – 2017 GovAmerica.org This book intends to open the debate between three main aspects of clinical practice:

psychotherapy (including psychological and philosophical influences), neurobiology and pharmacology. These three main themes are clinically applied in what we call the “ Intervention Triangle ” . The book will first focus on epistemologically distinct frameworks and gradually attempt to consider the integration of these three fundamental vertexes of practice. These vertexes are substantially unbalanced in the mental health field, and thus, this book tries to make sense of this phenomenon. Unique in its

interdisciplinary and comprehensive view of mental health problems and approaches, this book offers a new perspective on unidisciplinary integration that previous publications have not considered. As an innovative contribution to its field, this volume will be particularly relevant to practitioners working towards integrative frameworks. It will also be of interest to students, clinicians and researchers, in particular, those working in psychology, medicine, psychiatry, philosophy, social

work, and pharmacy.
