understand the prehistoric archaeological record.

Arihant CBSE Term 1 English Language & Literature Sample Papers Questions for Class 10 MCQ Books for 2021 (As Per CBSE Sample Papers issued on 2 Sep 2021) Dheeraj Kumar Singh

Strengthening Family Coping Resources (SFCR) uses a skill-building, multi-family group framework to teach constructive resources to families who have a high exposure to stress and trauma. As an intervention for high-risk families, SFCR can cause a reduction in symptoms of traumatic distress and behavior problems and help families demonstrate higher functioning. The SFCR manual is based on a systemic, family approach and uses empirically-supported trauma treatment that focuses on family ritual, storytelling, and narration, which improves communication and understanding within family members. The manual is organized into three accessible parts:

- Part 1 details the theoretical and empirical foundations of SFCR
- Part 2 focuses on implementation and the clinical guidelines for conducting SFCR
- Part 3 contains session guidelines focused on the multi-family group versions of SFCR

Each session included in the intervention is structured according to specific guidelines, and instructions provide examples of what facilitators might say to a group. Formed through the input

of psychiatrists, psychologists, social workers, and anthropologists, Strengthening Family Coping Resources will help you reduce the symptoms of traumatic stress disorders and increase coping resources in children, adult caregivers, and the family system. It also provides a novel approach to addressing co-occurring traumatic reactions in multiple family members by including developmentally appropriate skill-building activities that are reinforced with family practice. For anyone working with families in a therapeutic capacity, this manual is a must-have resource.

Life cycle engineering deals with technologies for shifting the industry from mass production and mass consumption paradigm to closed loop manufacturing paradigm, in which required functions are provided for customers with the minimum amount of production. This subject is discussed from the various aspects, such as life cycle design, design for environment, reduce/reuse/recycle, life cycle assessment, and sustainable business models. "Advances in Life Cycle Engineering for Sustainable Manufacturing Businesses" gathers together papers from the 14th International CIRP Life Cycle Engineering Conference. This conference is the longest running annual meeting in the field, in which papers are presented regarding developments of leading edge technologies, proposals of new concepts, and prominent industry case studies.

Changing Academic Profession international survey in order to document the personal characteristics, career trajectories, sense of identity/commitment and job satisfaction of academics in 14 countries with different levels of economic and social development and different higher education systems. With nearly 26,000 academics surveyed in 19 countries (of which 14 are reporting their results in this volume), the empirical basis of the book is the most up-to-date and far-reaching in the area. With major changes taking place both in the local and global contexts of higher education and in the working conditions within individual universities, as exemplified by increasing managerialism and performance-based funding, it is important to consider the impact of these changes on the profiles and working lives of the academic profession across different countries. But it is also important to look at the ways in which the faculty's changing profile impacts on the organisation and management of universities and on the delivery of their central functions. Although not always obvious in the short-term, academic work and its conditions attract, incorporate and promote different types of individuals who, in turn, exert considerable influence on the nature of academic work, higher education institutions and, potentially, society. As faculty members are central to the teaching, research and service enterprise activities of higher education, it is important to understand their personal characteristics, career trajectories, sense of identity and commitment, and job satisfaction. These are central for understanding the academic profession in general and, in particular, the factors affecting their involvement and productivity in the work of their institutions. These are a complex result of a mixture of contextual factors (e.g. the status and regulatory framework of the higher education system, the features and atmosphere of the particular institution) and personal factors (e.g. gender, educational attainment, family background, attitudes to work and broader social values). This book examines the different situations facing the academic profession in individual countries and provides comparative studies of country differences.
