The separation between ownership and control has become common practice over the last century, in most medium and large firms across the world. Throughout the twentieth century, the theory of the firm and the theory of industrial organization developed parallel and complementary views on managerial firms. This book offers a comprehensive exposition of this debate. In its survey of strategic delegation in

oligopoly games, An Economic Theory of Managerial Firms is able to offer a reinterpretation of a range of standard results in the light of the fact that the control of firms is generally not in the hand of its owners. The theoretical models are supported by a wealth of real-world examples, in order to provide a study of strategic delegation that is far more in-depth than has previously been found in the literature on industrial organization. In this volume, analysis is extended in several directions to cover applications concerning the role of: managerial firms in mixed market; collusion and mergers; divisionalization and vertical relations; technical progress; product differentiation; international trade; environmental issues;

and the intertemporal growth of firms. This book is of great interest to those who study industrial economics, organizational studies and industrial studies.

Personnel Management Springer Nature Accounting in Networks is the first book that in a comprehensive way covers the emerging issue of accounting and control in horizontal relations across legally independent organizations. During the last 20 years, organisations have shown an increased interest in collaborations that cross company boundaries. New organisational forms, such as alliances, partnerships, joint ventures, outsourcing and networks have received increased attention. This development has pushed management accounting researchers into examining the lateral effects of accounting. This book examines these lateral effects on

<p>accounting, and creates a comprehensive summary of what has been achieved so far and what interesting developments will occur in the coming ten years. The book covers a variety of inter-organizational settings - dyads, networks, joint ventures, public sector - and the roles of accounting therein. It also deals with specific inter-organizational accounting techniques - customer accounting, target costing and open book accounting - which companies use to manage in a world of inter-organizational relationships and networks. The book also covers different theoretical perspectives - transactional cost economics, the industrial-network approach, actor-</p>	<p>network theory, institutional theory - on accounting in networks. Each chapter focus on a specific angle of accounting in networks, assess theoretical and empirical evidence, summarize the current position/debate and discuss promising avenues for future research. <u>County Business Patterns, Kansas</u> IGI Global School education reform is a dynamic process. It utilizes in-depth case studies comprising two anonymous Scottish councils responsible for providing and reforming school education services. Drawing mainly on risk management and structuration theories with elements of complexity leadership and institutional theories, the book explains contextual issues around the reform of Scottish school education services (SSES). It illustrates that social risks associated with reform can be used to explain emerging threats. Furthermore, it demonstrates that agent-structure duality may be instrumental to the production and management of social risks. The book also shows how the concept of</p>
