This book includes selected papers from the International Conference on Data Science and Intelligent

Applications (ICDSIA 2020), hosted by Gandhinagar Institute of Technology

(GIT), Gujarat, India, on January 24–25, 2020. The proceedings present

original and high-quality contributions on theory and practice concerning

emerging technologies in the areas of data science and intelligent

applications. The conference provides a forum for researchers from academia

and industry to present and share their ideas, views and results, while also

helping them approach the challenges of technological advancements from

different viewpoints. The contributions cover a broad range of topics,

including: collective intelligence, intelligent systems, IoT, fuzzy systems,

Bayesian networks, ant colony optimization, data privacy and security,

data mining, data warehousing, big data analytics, cloud computing, natural

language processing, swarm intelligence, speech processing,

machine learning and deep learning, and intelligent applications and

systems. Helping strengthen the links between academia and industry, the

book offers a valuable resource for instructors, students, industry

practitioners, engineers, managers, researchers, and scientists alike.
