When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

In this collection of essays, the same researchers return to these neighbourhoods ten years later to see what's changed. Are these neighbourhoods now more liveable or leaveable? *Social Housing, Disadvantage and Neighbourhood Liveability* examines the major national and local developments that externally affected these neighbourhoods: the Celtic tiger boom, area-based interventions, and reforms in social housing management. Additionally, the book examines changes in the culture of social housing through studies of crime within social housing, changes in public service delivery, and media reporting on social housing. *Social Housing, Disadvantage and Neighbourhood Liveability* offers a new body of data valuable to researchers in Ireland and abroad on how to create more equitable and liveable social housing.
