In June 2005 four US Navy SEALs left their base in Afghanistan for the Pakistani border. Their mission was to capture or kill a notorious al-Qaeda leader known to be ensconced in a Taliban stronghold surrounded by a small but heavily armed force. Less than twenty-four hours later, only one of those Navy SEALs was alive. This is the story of team leader Marcus Luttrell, the sole survivor of Operation Redwing. Blasted unconscious by a rocket grenade, blown over a cliff, but still armed and still breathing, Luttrell endured four desperate days fighting the al-Qaeda assassins sent to kill him, before finding unlikely sanctuary with a Pashtun tribe who risked everything to protect him from the circling Taliban killers.

Why are the many highly capable autonomous robots that have been promised for novel applications driven by society, industry, and research not available - day despite the tremendous progress in robotics science and systems achieved during the last decades? Unfortunately, steady improvements in specific robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments. This is mainly due to the lack of - vancements in robot software that master the development of robotic systems of ever increasing complexity. In addition, fundamental open problems are still awaiting sound answers while the development of new robotics applications s- fers from the lack of widely used tools, libraries, and algorithms that are redesigned in a modular and performant manner with standardized interfaces. Simulation environments are playing a major role not only in reducing development time and cost, e. g. , by systematic software- or hardware-in-the-loop testing of robot performance, but also in exploring new types of robots and applications. H- ever, their use may still be regarded with skepticism. Seamless migration of code using robot simulators to real-world systems is still a rare circumstance, due to the complexity of robot, world, sensor, and actuator modeling. These challenges drive the quest for the next generation of methodologies and tools for robot development. The objective of the International Conference on Simulation, Modeling, and Programming for Autonomous Robots (SIMPARG) is to o'er a unique forum for these topics and to bring together researchers from academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software.

Designed as a self-study resource, this handbook guides readers through nine categories of instructional strategies proven to improve student achievement.

Sections 1-9 address the nine categories of instructional strategies that can be applied to all types of content, at all grade levels, and with all types of students: Identifying similarities and differences; Summarizing and note taking; Reinforcing effort and providing recognition; Homework and practice; Representing knowledge; Learning groups; Setting objectives and providing feedback; Generating and testing hypotheses; and Cues, questions, and advance organizers. For each of the nine categories, exercises, brief questionnaires, tips and recommendations, samples, worksheets, rubrics, and other tools are provided. For elementary and middle school teachers, counselors, evaluators, and administrators.

Under a framework in which technology and organizational innovation are markedly separated, this book advances knowledge on the topic by exploring the antecedents of a firm ' s adoption of organizational innovation and its performance consequences. The concept of organizational innovation encompasses the introduction of new administrative organizational and managerial activities, although currently it is accepted that these terms overlap. There are two different kinds of organizational innovation, usually inter-related: structural innovations (organizational arrangement and the division of labour within it) and managerial innovations (the way a firm organizes its activities or its personnel). Based on papers from the Organizational Innovation and its Background, Consequences and Technological Complementarities Performance Conference, this volume contributes to the organizational and innovation literature by providing insights on the antecedents of the adoption of management innovation; exploring the complementary roles of management and technological innovation; addressing the performance consequences of management innovation adoption with and without technological innovation; and discusses management innovation using the resource-based view, thus enriching that theoretical approach.

NEW YORK TIMES BESTSELLER • From the bestselling author of *Before We Were Yours* comes a dramatic historical novel of three young women searching for family amid the destruction of the post-Civil War South, and of a modern-day teacher who learns of their story and its vital connection to her students ' lives. " An absorbing historical . . . enthralling. " —Library Journal Bestselling author Lisa Wingate brings to life startling stories from actual " Lost Friends " advertisements that appeared in Southern newspapers after the Civil War, as newly freed slaves desperately searched for loved ones who had been sold away. Louisiana, 1875: In the tumultuous era of Reconstruction, three young women set off as unwilling companions on a perilous quest: Hattie, a freed slave; Lavinia, the pampered heir to a now destitute plantation; and Juneau Jane, Lavinia ' s Creole half sister. Each carries private wounds and powerful secrets as they head for Texas, following roads rife with vigilantes and soldiers still fighting a war lost a decade before. For Lavinia and Juneau Jane, the journey is one of stolen inheritance and financial desperation, but for Hattie, torn from her mother and siblings before slavery ' s end, the pilgrimage west reignites an agonizing question: Could her long-lost family still be out there? Beyond the swamps lie the limitless frontiers of Texas and, improbably, hope. Louisiana, 1987: For first-year teacher Benedetta Silva, a subsidized job at a poor rural school seems like the ticket to canceling her hefty student debt—until she lands in a tiny, out-of-step Mississippi River town. Augustine, Louisiana, is suspicious of new ideas and new people, and Benny can scarcely comprehend the lives of her poverty-stricken students. But amid the gnarled live oaks and run-down plantation homes lie the century-old history of three young women, a long-ago journey, and a hidden book that could change everything.

New York Times bestselling author Lysa TerKeurst unveils her heart amid shattering circumstances and shows readers how to live assured when life doesn't turn out like they expected. What do you do when God ' s timing seems questionable, His lack of intervention hurtful, and His promises doubtful? Life

often looks so very different than we hoped or expected. Some events may simply catch us off guard for a moment, but others shatter us completely. We feel disappointed and disillusioned, and we quietly start to wonder about the reality of God ' s goodness. Lysa TerKeurst understands this deeply. But she's also discovered that our disappointments can be the divine appointments our souls need to radically encounter God. In *It's Not Supposed to Be This Way*, Lysa invites us into her own journey of faith and, with grit, vulnerability, and honest humor, helps us to: Stop being pulled into the anxiety of disappointment by discovering how to better process unmet expectations and other painful situations. Train ourselves to recognize the three strategies of the enemy so we can stand strong and persevere through unsettling relationships and uncertain outcomes. Discover the secret of being steadfast and not panicking when God actually does give us more than we can handle. Shift our suspicion that God is cruel or unfair to the biblical assurance that God is protecting and preparing us. Know how to encourage a friend and help her navigate hard realities with real help from God's truth.
