The Simplified Planner Teacher's Friend

This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

This lesson planner will add joy and color to your day! Keep up to 40 weeks of daily lesson plans in one convenient book! This book includes substitute teacher information, student roster sheets, and memorable quotations to use and discuss throughout the year. 12 large monthly planning calendar spreads are also included for year-long lesson planning as well as for scheduling appointments, conferences, and events. French Rococo É b é nisterie in the J. Paul Getty Museum HarperCollins

The first comprehensive catalogue of the Getty Museum ' s significant collection of French Rococo é b é nisterie furniture. This catalogue focuses on French é b é nisterie furniture in the Rococo style dating from 1735 to 1760. These splendid objects directly reflect the tastes of the Museum ' s founder, J. Paul Getty, who started collecting in this area in 1938 and continued until his death in 1976. The Museum ' s collection is particularly rich in examples created by the most talented cabinet masters then active in Paris, including Bernard van Risenburgh II (after 1696 – ca. 1766), Jacques Dubois (1694 – 1763), and Jean-Fran ç ois Oeben (1721 – 1763). Working for members of the French royal family and aristocracy, these craftsmen excelled at producing veneered and marquetry pieces of furniture (tables, cabinets, and chests of drawers) fashionable for their lavish surfaces, refined gilt-bronze mounts, and elaborate design. These objects were renowned throughout Europe at a time when Paris was considered the capital of good taste. The entry on each work comprises both a curatorial section, with description and commentary, and a conservation report, with construction diagrams. An introduction by Anne-Lise Desmas traces the collection ' s acquisition history, and two technical essays by Arlen Heginbotham present methodologies and findings on the analysis of gilt-bronze mounts and lacquer. The free online edition of this open-access publication is available at www.getty.edu/publications/rococo/ and includes zoomable, high-resolution photography. Also available are free PDF, EPUB, and Kindle/MOBI downloads of the book, and JPG downloads of the main catalogue images.

Travel Planner Schoolgirl Style

2022 Weekly/Monthly Planner J. Paul Getty Museum

This well-illustrated guide captures the beauty, diversity, and engaging world of bees and the native plants that support them. Superbly designed and organized, this is an indispensable source of information with extensive profiles for twenty-seven bee genera, plus twelve summary profiles for uncommon genera, and approximately one hundred native trees, shrubs, and perennials for the Midwest, Great Lakes, and Northeast regions. With over 1500 stunning photographs, detailed descriptions, and accessible science, environmental educator and research assistant Heather Holm brings to light captivating information about bees? life cycles, habitats, diet, foraging behaviors, crops pollinated, nesting lifestyles, seasonality, and preferred native forage plants. Bees are a singularly fascinating group of insects and this book makes it possible to observe, attract, and support them in their natural setting or in one's own garden. Not only does this guide assist the reader with bee identification in the field or by photo, it also notes microscopic features for the advanced user. The factors impacting bee populations, and the management of farms and public and residential landscapes for bees are also covered. Included in the bee forage (plant) chapters are plant profiles with range maps, habitat information, floral features and attractants, common bees attracted to the particular plant, and details about the ecological connections between the native plant and other flower-visiting insects. Noted also are birds dependent upon the product of the pollinated flowers (fruits and seeds). This is an excellent reference for amateur and professional naturalists, educators, gardeners, farmers, students, nature photographers, insect enthusiasts, biologists, and anyone interested in learning more about the diversity and biology of bees and their connection to native plants and the natural world.
