This book is a compilation of all the formulae that a mariner is commonly called upon to use but the exact workings of which he has perhaps forgotten. For each subject category, the author states the basic parameters in narrative form, often including a figure, graph, chart, diagram, or table, and then provides accompanying equations and their amplifications. Although some formulae that are simpler in format are propounded in other texts, many of those formulae lead to confusion in that "special rules" must be applied to them in order to obtain

a correct answer. However, the rules applied to the formulae in this book work for all problems. In a great circle sailing situation, for example, the fact of whether the vertex is ahead of you or behind you does not matter—if you apply the rule(s) given in this book, you will get the correct answer. Another important feature of the book is its devotion of over ten pages of material to the international system of units (S.I.)

Cover letters are all the same. They're useless. You write the same lies over and over

again, listing the store-bought parts of yourself that you respect the least. God knows how they tell anyone apart, but this is how it's done. And then one day a car comes out of nowhere, and suddenly everything changes and you don't know if he'll ever wake up. You get out of bed in the morning, and when you sit down to write another paint-by-numbers cover letter, something entirely different comes out. You start threatening instead of begging. You tell impolite jokes. You talk about your childhood and your sexual fantasies. You sign your real name and you put yourself honestly into letter after letter and there is no way you are ever going to get this job. Not with a letter like this. And you send it anyway.

How are users influenced by social media platforms when they generate content, and does this influence affect users' compliance with copyright laws? These are pressing questions in today's internet age, and *Regulating Content on Social Media* answers them by analysing how the behaviours of social media users are regulated from a copyright perspective. Corinne Tan, an internet governance specialist, compares copyright laws on selected social media platforms, namely Facebook, Pinterest, YouTube, Twitter and Wikipedia, with other regulatory factors such as the terms of service and the technological features of each platform. This comparison enables her to explore how each platform affects the role copyright laws play in securing compliance from their users. Through a case study detailing the content generative activities undertaken by a hypothetical user named Jane Doe, as well as drawing from empirical studies, the book argues that – in spite of copyright's purported regulation of certain behaviours – users are 'nudged' by the social media platforms themselves to behave in ways that may be inconsistent with copyright laws. Praise for *Regulating Content on Social Media* 'This book makes an important contribution to the field of social media and copyright. It tackles the real issue of how social media is designed to encourage users to engage in generative practices, in a sense

effectively "seducing" users into practices that involve misuse or infringement of copyright, whilst simultaneously normalising such practices.' Melissa de Zwart, Dean of Law, Adelaide Law School, Australia "This timely and accessible book examines the regulation of content generative activities across five popular social media platforms – Facebook, Pinterest, YouTube, Twitter and Wikipedia. Its in-depth, critical and comparative analysis of the platforms' growing efforts to align terms of service and technological features with copyright law should be of great interest to anyone studying the interplay of law and new media." With this publication, WIPO and the author aim at making available for judges, lawyers and law enforcement officials a valuable tool for the handling of intellectual property cases. To that effect, the case book uses carefully selected court decisions drawn from various countries with either civil or common law traditions. The extracts from the decisions and accompanying comments illustrate the different areas of intellectual property law, with an emphasis on matters that typically arise in connection with the enforcement of intellectual property rights in civil as well as criminal proceedings.

This open access book analyses intellectual property codification and innovation governance in the development of six key industries in India and China. These industries are reflective of the innovation and economic development of the two economies, or of vital importance to them: the IT Industry; the film industry;

---

the pharmaceutical industry; plant varieties and food security; the automobile industry; and peer production and the sharing economy. The analysis extends beyond the domain of IP law, and includes economics and policy analysis. The overarching concern that cuts through all chapters is an inquiry into why certain industries have developed in one country and not in the other, including: the role that state innovation policy and/or IP policy played in such development; the nature of the state innovation policy/IP policy; and whether such policy has been causal, facilitating, crippling, co-relational, or simply irrelevant. The book asks what India and China can learn from each other, and whether there is any possibility of synergy. The book provides a real-life understanding of how IP laws interact with innovation and economic development in the six selected economic sectors in China and India. The reader can also draw lessons from the success or failure of these sectors.

*A Casebook on the Enforcement of Intellectual Property Rights* UNESCO Metaphors, moral panics, folk devils, Jack Valenti, Joseph Schumpeter, John Maynard Keynes, predictable irrationality, and free market fundamentalism are a few of the topics covered in this lively, unflinching examination of the Copyright Wars: the pitched battles over new technology, business models, and most of all, consumers. In *Moral Panics and the Copyright Wars*, William Patry lays bare how we got to where we are: a bloated, punitive legal regime that has strayed far from its modest, but important roots. Patry demonstrates how copyright is a utilitarian government program--not a property or moral right. As a government program, copyright must be regulated and held accountable to ensure it is serving its public purpose. Just as Wall Street must serve Main Street, neither can copyright be left to a Reaganite "magic of the market." The way we have come to talk about copyright--metaphoric language demonizing everyone involved--has led to bad business and bad policy decisions. Unless we recognize that the debates over copyright are debates over business models, we will never be able to make the correct business and policy decisions. A centrist and believer in appropriately balanced copyright laws, Patry concludes that calls for

---

strong copyright laws, just like calls for weak copyright laws, miss the point entirely: the only laws we need are effective laws, laws that further the purpose of encouraging the creation of new works and learning. Our current regime, unfortunately, creates too many bad incentives, leading to bad conduct. Just as President Obama has called for re-tooling and re-imagining the auto industry, Patry calls for a remaking of our copyright laws so that they may once again be respected.

The book commemorates the 25th Anniversary of the Internet in March 2014 and celebrates the achievements and benefits while also pointing out the limitations and perils of the Internet. Edited by Dr Jonathan James of Edith Cowan University in Australia, the book identifies the broad characteristics of the Internet age, and includes several studies that outline the educational benefits of the Internet and social media platforms like Facebook which connect families in the diaspora. The Internet and the Google Age also looks at the place of faith and religion on the Internet. It describes how life in our

digital world is both exciting and challenging. An excellent introduction to Internet Studies, the book predicts that life will become more and more digitalized and how the current demarcation between private and public spheres, home and office, human and non humans (robots) will become less and less apparent as the Internet becomes more interwoven into our lives.

'Thank you for your order, Mr Mainframe Customer. The cost is £5 million and the lead-time for manufacture will be two years. In the meantime you will have to build a special computer centre to our specification. For our part, our project team will help you recruit and train potential programmers and we shall advise on how you might use the system.' How different from today when the customer will want to see a specific application running before he puts a hand in his/her pocket. Chris Yardley lived the changes as a computer salesman and tells his story of a career living and working in five countries. Warts and all. The ecstasies, the heartbreaks and idiocies of major corporations. His career was not a planned one. In a growing industry, opportunities presented themselves and Chris believes he grasped every one presented. Having written his story, he has had every chapter verified by at least one person who features in that narrative. His respondents have universally endorsed the facts with comments such as 'Wow, I'd forgotten most of that'. 'You have a fantastic memory.' 'I never knew before the full facts of what happened.' 'How have you remembered all the circumstances?' 'It really is a people business.' This is the only book that has followed a computer sales career over almost 50 years.

In the aftermath of catastrophes, it is common to find prior indicators, missed signals, and dismissed alerts that, had they been recognized and appropriately managed before the event, could have resulted in the undesired event being averted. These indicators are typically called "precursors." *Accident Precursor Analysis and Management: Reducing Technological Risk Through Diligence* documents various industrial and academic approaches to detecting, analyzing, and benefiting from accident precursors and examines public-sector and private-sector roles in the collection and use of precursor information. The book includes the analysis, findings and recommendations of the authoring NAE committee as well as eleven individually authored background papers on the opportunity of precursor analysis and management, risk assessment, risk management, and linking risk assessment and management.

Contrary to a generally held view that pearls are found by chance in oysters, almost all are now produced from farms. This book is a comprehensive treatment of all aspects of the biology of pearl oysters, their anatomy, reproduction, genetics, diseases, etc. It considers how they are farmed from spawning and culturing larvae in hatcheries to adults in the ocean; how various environmental factors, including pollution affect them; how modern techniques are successfully producing large numbers of cultured pearls. This is the ultimate reference source on pearl oysters and the culture of pearls, written and edited by a number of scientists who are world experts in their fields. • Comprehensive treatment of pearl oyster biology and pearl culture • Written by the top world authorities • Highly illustrated and figured • Of practical relevance to a broad readership, from professional biologists to those involved in the practicalities and practice of pearl production.
