The Gemini space flight program
is all but forgotten, having
been eclipsed by the
spectacular drama and success

of the Apollo flights to the
Moon. Neither was it a pioneer,
coming after the heroic and
pathfinding Mercury project. But
whereas Mercury was derided as
'spam-in-a-can' and Apollo was a
truck towing a lunar lander, the
Gemini spacecraft was an agile
flying machine for fighter
pilots. Initially called the
Mercury Mark II, it gave the
United States the tool it needed
to learn how to fly in space,
and in so doing it prepared the
country's space agency, NASA, to
set off for the Moon.

1966 Ford and Mercury Shop Manual Detroit Iron
Ford and Mercury

"Muscle Car Source Book is a muscle car buff's encyclopedia that chronicles the how's why's, and when's of American muscle car manufacturers like Dodge, Plymouth, Ford, and more"--

NASA EP.

The automotive industry underwent great change in the 1960s and the early 1970s. The continuing trend toward market consolidation, the proliferation of sizes and nameplates, and the "need for speed" characterized this period, loosely labeled as the muscle car era. This is an exhaustive reference work to American made cars of model years 1960-1972. Organized by year (and summarizing

the market annually), it provides a yearly update on each make's status and production figures, then details all models offered for that year. Model listings include available body styles, base prices, engine and transmission choices, power ratings, standard equipment, major options and their prices, curb weight and dimensions (interior and exterior), paint color choices, changes from the previous year's model, and sales figures. Also given are assembly plant locations and historical overviews of each model nameplate. The book is profusely illustrated with 1,018 photographs.
