Do-it-yourself and professional mechanics will discover the right parts and components needed to interchange across different models and years.

Monthly Catalog of United States Government Publications Detroit Iron

The Gemini space flight program is all but forgotten, having been eclipsed by the spectacular drama and success of the Apollo flights to the Moon.

Neither was it a pioneer, coming after the heroic and pathfinding Mercury project. But whereas Mercury was derided as 'spam-in-a-can' and Apollo was a truck towing a lunar lander, the Gemini spacecraft was an agile flying machine for fighter pilots. Initially called the Mercury Mark II, it gave the United States the tool it needed to learn how to fly in space, and in so doing it prepared the country's space agency, NASA, to set off for the Moon.

Clymer Repair Manuals

The automotive industry underwent great change in the 1960s and the early 1970s. The continuing trend toward market

consolidation, the proliferation of sizes and nameplates, and the "need for speed" characterized this period, loosely labeled as the muscle car era. This is an exhaustive reference work to American made cars of model years 1960-1972. Organized by year (and summarizing the market annually), it provides a yearly update on each make's status and production figures, then details all models offered for that year. Model listings include available body styles, base prices, engine and transmission choices, power ratings, standard equipment, major options and their prices, curb weight and dimensions (interior and exterior), paint color choices, changes from the previous year's model, and sales figures. Also given are assembly plant locations and historical overviews of each model nameplate. The book is profusely illustrated with 1,018 photographs.
