The Porsche 914 was born into consistently confusing and troubled times at Porsche and Volkswagen, not least with the idea of a non-911 Porsche horrifying many at the time. A Porsche with an engine that wasn't in the back was simply unthinkable. Richard Gooding examines the story of a car of mixed parentage, which against the odds became a success in its relatively short, six-and-a-half year lifespan. Around 119,000 cars were sold from 1969 to 1975, outselling contemporary rivals such as the Opel GT, and meaning it was the first mid-engined car to achieve six-digit sales. As a present-day classic, although challenging to some, low-slung looks and bright colours make the 1970s 914 period-perfect. Combined with near-ideal weight distribution and a low centre of gravity, its mid-engine layout means the 914 can achieve cornering G-forces comparable to the contemporary 911. The 914 was seen as a car that could inject a shot of glamour into VW's slightly worthy and dependable range of air-cooled cars. This book covers the history, development and manufacture of the 914 through troubled times at Porsche and Volkswagen and studies the impact of its design upon its successors. Buying and owning a 914 today is covered, and the book is illustrated with 218 colour photographs.

The 924 Carrera was a homologation model built to qualify the 924 model to race in Group 4. One of the great supercars of the 1980s, the 924 Carrera was considered by many to have better handling characteristics than Porsche's flagship 911. The book features

interviews with many of those involved with the car at the time together with race stories, statistics, and a unique exposé of component failures during racing.

There is renewed interest in the Moon in recent years, with the news that a Chinese lunar rover landed on the Moon in January 2014, and NASA announcing that it is looking for private partners to land a robot on the Moon's surface, as the first step in a programme to exploit the commercial opportunities offered by the Moon. Recent lunar expeditions by both orbiting spacecraft and 'landers' have uncovered far more detail about the Moon's surface and geology, including the trail of Neil Armstrong's first walk on the Moon in 1969. This manual explains in simple and straightforward terms, with a wealth of illustrations and photographs, what we have discovered about the Moon over the centuries, along with a general overview of the vehicles involved in the exploration.

Moon Manual Veloce Publishing Ltd

Beginning with a look at the SL model's heritage, this book describes the full development and production history of a modern classic. Covering available models in all the major markets, year-by-year, and including limited editions, the data is supported by contemporary illustrations, sourced from the factory, plus in-depth appendices.

This manual covers all 1968 through 1973 Fastback & Squareback models with the latest data from Volkswagen of America, Inc. You will find step-by-step procedures for testing & troubleshooting the fuel injection system without special equipment. Clear photos show the order of assembly for rebuilding the manual & automatic transmissions, along with all wear tolerance specifications. Like other Bentley manuals, it features full wiring diagrams, complete specifications, & troubleshooting tables for every year & model. *Scientific and Technical Books and Serials in Print* The Crowood Press

On July 20, 1969, US astronaut Neil Armstrong became the first man to walk on the moon. The Apollo 11 mission that carried him and his two fellow astronauts on their epic journey marked the successful culmination of a quest that, ironically, had begun in Nazi Germany thirty years before. This is the story of the Apollo 11 mission and the 'space hardware' that made it all possible. Author Chris Riley looks at the evolution and design of the mighty Saturn V rocket, the Command and Service Modules, and the Lunar Module. He also describes the space suits worn by the crew, with their special life support systems. Launch procedures are described, 'flying'

the Saturn V, navigation, course correction 'burns', orbital rendezvous techniques, flying the LEM, moon landing, moon walk, take-off from the moon, and earth re-entry procedure. Includes performance data, fuels, biographies of Armstrong, Aldrin and Collins, Gene Kranz and Werner von Braun. Detailed appendices cover all of the Apollo missions, with full details of crews, spacecraft names and logos, mission priorities, moon landing sites, and the Lunar Rover.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his

kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Mazda 1500, 1800 for 1967-73 Autobook

Automakers are as prone to turn out clunkers as politicians are to lie. Their cars may be ugly, misconceived, badly built, diabolical to drive, ridiculously thirsty, or just plain unreliable. So which were the worst of the past 20 years?

The Porsche 924 Carrera

Includes a tenth anniversary issue, dated Nov. 1945.

The Bulb Horn

The Lotus Europa was Colin Chapman and Lotus's first mid-engined road car, and was produced from 1966 through to 1975.

Originally designed to slot into the Lotus range below the Elan as a low cost replacement for the Lotus 7, the Europa eventually sat alongside the Elan and Plus 2 as a comparable sports car in its own right. Starting with the design philosophy behind the development of the Europa, this book provides detailed technical descriptions of all the major versions of the model, starting with the Renault-powered Series 1 through to the Lotus Twin

Cam powered Special. It looks at the cars on the road, and the racing Type 47 derived from the road cars which competed in the small capacity Group 6 class, as well as featuring in historic racing today. With owners' impressions and interviews with ex-Lotus employees, the book provides a valuable insight into owning, running, and racing these iconic cars.
