Throughout aviation history there have been many aircraft designs that have failed to progress beyond the drawing board for a variety of reasons. The aircraft that have taken to the skies represent only a

small percentage of those that were planned. This latest title in the highly successful 'Secret Projects' series is also the first to deal with United States aircraft. Compiled by Tony Buttler, who has been researching the subject for many years, this book examines the great variety of U.S. fighter designs between the end of World War II and the period immediately after the USA's withdrawal from Vietnam.

Published nearly a decade ago, *Fluid Machinery: Performance, Analysis, and Design* quickly became popular with students, professors, and professionals because of its comprehensive and comprehensible introduction to the fluid mechanics of turbomachinery. Renamed to reflect its wider scope and reorganized content, this second edition provides a more logical flow of information that will enhance understanding. In particular, it presents a consistent notation within and across chapters, updating material when appropriate.

Although the authors do account for the astounding growth in the field of computational fluid dynamics that has occurred since publication of the first edition, this text emphasizes traditional "one-dimensional" layout and points the way toward using CFD for turbomachinery design and analysis. Presents Extensive Examples and Design Exercises to Illustrate Performance Parameters and Machine Geometry By focusing on the preliminary design and selection of equipment to meet performance specifications, the authors promote a basic yet thorough understanding of the subject. They cover topics including gas and hydraulic turbines and equipment that is widely used in the industry, such as compressors, blowers, fans, and pumps. This book promotes a pragmatic approach to turbomachinery application and design, examining a realistic array of difficulties and conflicting requirements. The authors use examples from a broad range of industrial applications to illustrate the generality of the basic design approach and the

common ground of seemingly diverse areas of application. With a variety of illustrations, examples, and exercises that emphasize real-world industrial applications, this book not only prepares students to face industrial applications with confidence, but also supplies professionals with a compact and easy-to-use reference.

Vaccine Manufacturing and Production is an invaluable reference on how to produce a vaccine - from beginning to end - addressing all classes of vaccines from a

processing, production, and regulatory viewpoint. It will provide comprehensive information on the various fields involved in the production of vaccines, from fermentation, purification, formulation, to regulatory filing and facility designs. In recent years, there have been tremendous advances in all aspects of vaccine manufacturing. Improved technology and growth media have been developed for the production of cell culture with high cell density or fermentation. Vaccine

Manufacturing and Production will serve as a reference on all aspects of vaccine production by providing an in-depth description of the available technologies for making different types of vaccines and the current thinking in facility designs and supply issues. This book will provide insight to the issues scientists face when producing a vaccine, the steps that are involved, and will serve as a reference tool regarding state-of-the-art vaccine manufacturing technologies and facility set-up. Highlights include:

- Comprehensive coverage of vaccine production : from a process point of view-fermentation to purification to formulation developments;
- from a production point of view - from facility design to manufacturing; and from a regulatory point of view - requirements from government agencies
- Authors from different major pharmaceutical and biotechnology companies
- Describes the challenges and issues involved in vaccine production and manufacturing
- of the different classes of

vaccines, an area not covered by other books currently on the market

This book tells you why and how. This book brings together a collection of popular articles previously published by the author in assorted car magazines. Based on in-depth research carried out at Manchester University, the articles investigate how classic engines respond to

modern petrol/gasoline, and the results are presented in a way that any enthusiast can understand. One chapter ranks some brands and grades of modern petrol/gasoline, helping you choose the best type for your vehicle, while other chapters present the findings that debunk some of the myths about petrol/gasoline and engines. Real data is provided to help you tune your classic vehicle, ensuring that it runs as it should, allowing you to experience the pleasure of driving your classic car instead of worrying about it breaking down. The appendix gives a down-to-earth description of how to rebuild and tune SU and similar carburetors. Paul Ireland's years of experience and no-nonsense scientific approach will help you get the best from your classic car.

Outsourcing is a key issue for many organisations having moved from the contracting out of peripheral activities such as cleaning to more critical areas such as design and marketing. This report is for managers and people in finance and accounting functions and takes a practical approach in developing a framework and then applying this framework in an actual organisation which makes it easier for practitioners to understand. • This report provides a framework which incorporates both qualitative

and quantitative performance measures that can be used in the outsourcing process • This research is of value to commercial and public sector organisations as well as academics as it provides insights for organisations considering outsourcing that will enable them to assess service levels throughout the contract
