current electric vehicle and battery state-of-the-art, this work describes dynamic software tools to assess the impacts resulting from the electric vehicles deployment on the steady state and dynamic operation of electricity grids, identifies strategies to mitigate them and the possibility to support simultaneously large-scale integration of renewable energy sources. New business models and control management architectures, as well as the communication infrastructure required to integrate electric vehicles as active demand are presented.

Finally, regulatory issues of integrating electric vehicles into modern power systems are addressed. Inspired by two courses held under the EES-UETP umbrella in 2010 and 2011, this contributed volume consists of nine chapters written by leading researchers and professionals from the industry as well as academia. Promoting and Marketing Events  
Genocide, Ethnonationalism, and the United Nations examines a series of related crises in human civilization growing out of conflicts between powerful states or empires and indigenous or stateless peoples. This is the first

book to attempt to explore the causes of genocide and other mass killing by a detailed exploration of UN archives covering the period spanning from 1945 through 2011. Hannibal Travis argues that large states and empires disproportionately committed or facilitated genocide and other mass killings between 1945 and 2011. His research incorporates data concerning factors linked to the scale of mass killing, and recent findings in human rights, political science, and legal theory. Turning to potential solutions, he argues that the concept of genocide imagines a future system of global governance under which the nation-state itself is made subject to law. The United

Nations, however, has deflected the possibility of such a cosmopolitical law. It selectively condemns genocide and has established an institutional structure that denies most peoples subjected to genocide of a realistic possibility of global justice, lacks a robust international criminal tribunal or UN army, and even encourages "security" cooperation among states that have proven to be destructive of peoples in the past. Questions raised include: What have been the causes of mass killing during the period since the United Nations Charter entered into force in 1945? How does mass killing spread across international borders, and what is the role of resource wealth, the

---

arms trade, and external interference in this process? Have the United Nations or the International Criminal Court faced up to the problem of genocide and other forms of mass killing, as is their mandate? Lemon-Aid New and Used Cars and Trucks 1990 – 2016 This accessible book introduces students to the theories, concepts and skills required to promote an event successfully. To promote an event effectively it is essential to understand marketing, but it is also important to recognise that it is not just consumers who are the audience: other publics who may not

necessarily attend can have a fundamental effect on the success of an event as well. Uniquely therefore, this book covers two related themes: marketing and public relations in an events context. This will offer events planners a comprehensive guide on how to promote events to a range of audiences, and on how to use this to manage an event 's long-term reputation. The book focuses on core marketing and PR current theory specifically relevant to the events industry and introduces topics such as marketing strategy, the consumer, marketing PR and

how to use the internet to promote events. It integrates a range of international case studies from small-scale events to mega-events to help show how theory can be applied in practice. It further includes inserts of interviews with practitioners in the field, to offer insight into the realities of event communication and to show how to overcome potential pitfalls. Learning outcomes, discussion questions and further reading suggestions are included to aid navigation throughout the book, spur critical thinking and further students ' knowledge. The

---

book is essential reading for all students studying Events Management, and provides valuable reading for students, academics and practitioners interested in marketing and public relations in general. Scientific and Technical Aerospace Reports Research into the manufacture of lightweight automobiles is driven by the need to reduce fuel consumption to preserve dwindling hydrocarbon resources without compromising other attributes such as safety, performance, recyclability and cost. Materials, design and manufacturing for lightweight vehicles will make it easier for

engineers to not only learn about the materials being considered for lightweight automobiles, but also to compare their characteristics and properties. Part one discusses materials for lightweight automotive structures with chapters on advanced steels for lightweight automotive structures, aluminium alloys, magnesium alloys for lightweight powertrains and automotive structures, thermoplastics and thermoplastic matrix composites and thermoset matrix composites for lightweight automotive structures. Part two reviews manufacturing and design of lightweight automotive structures covering topics such as manufacturing processes for light alloys, joining for lightweight

vehicles, recycling and lifecycle issues and crashworthiness design for lightweight vehicles. With its distinguished editor and renowned team of contributors, Materials, design and manufacturing for lightweight vehicles is a standard reference for practicing engineers involved in the design and material selection for motor vehicle bodies and components as well as material scientists, environmental scientists, policy makers, car companies and automotive component manufacturers. Provides a comprehensive analysis of the materials being used for the manufacture of lightweight vehicles whilst comparing characteristics and properties

Examines crashworthiness design issues for lightweight vehicles and further emphasises the development of lightweight vehicles without compromising safety considerations and performance. Explores the manufacturing process for light alloys including metal forming processes for automotive applications.

Every one of the many millions of cars manufactured annually worldwide uses shock absorbers, otherwise known as dampers. These form a vital part of the suspension system of any vehicle, essential for optimizing road holding, performance and safety. This, the second edition of the Shock Absorber Handbook (first edition published in 1999), remains the only English language book devoted to the

subject. Comprehensive coverage of design, testing, installation and use of the damper has led to the book's acceptance as the authoritative text on the automotive applications of shock absorbers. In this second edition, the author presents a thorough revision of his book to bring it completely up to date. There are numerous detail improvements, and extensive new material has been added particularly on the many varieties of valve design in the conventional hydraulic damper, and on modern developments such as electrorheological and magnetorheological dampers. "The Shock Absorber Handbook, 2nd Edition" provides a thorough

treatment of the issues surrounding the design and selection of shock absorbers. It is an invaluable handbook for those working in industry, as well as a principal reference text for students of mechanical and automotive engineering.

This is the story of open access publishing - why it matters now, and for the future. In a world where information has never been so accessible, and answers are available at the touch of a fingertip, we are hungrier

for the facts than ever before - something the Covid-19 crisis has brought to light. And yet, paywalls put in place by multi-billion dollar publishing houses are still preventing millions from accessing quality, scientific knowledge - and public trust in science is under threat. On 4 September 2018, a bold new initiative known as 'Plan S' was unveiled, kickstarting a world-wide shift in attitudes towards open access research. For the first time, funding agencies across continents joined forces to impose new

rules on the publication of research, with the aim of one day making all research free and available to all. What followed was a debate of global proportions, as stakeholders asked: Who has the right to access publicly-funded research? Will it ever be possible to enforce change on a multi-billion dollar market dominated by five major players? Here, the scheme's founder, Robert-Jan Smits, makes a compelling case for Open Access, and reveals for the first time how he set about

---

turning his controversial plan into reality - as well as some of the challenges faced along the way. In telling his story, Smits argues that the Covid-19 crisis has exposed the traditional academic publishing system as unsustainable.--
