Vehicle Dynamics Routledge Vietnam as if... follows five young people who have moved from the countryside to the city. Their dramatic everyday lives illuminate some of the most pressing issues in Vietnam today:

' The Sticky Rice Seller ' explores gender roles;

' The Ball Boy ' is all about the struggles of sexual and ethnic minorities; ' The Professional ' examines relations between rich and poor; ' The Goalkeeper ' delves into politics and ideology; and ' The Student ' reflects upon family and faith. The stories also reboot several classics of Vietnamese literature for the twenty-first century, including ' Floating Dumplings ' by feminist poet Ho Xuan Huong, Vu Trong Phung ' s satire of French colonialism Dumb Luck, Nguyen Du ' s epic account of fate and sacrifice ' The Tale of Kieu ' , and the proclamations of Ho Chi Minh. These novellas reveal the deepest sentiments of Vietnamese youth as they – like youth everywhere – come of age, fall in love and contest their destiny. In 2011 Kim Huynh returned to Vietnam, having left more than three decades earlier. He had few plans other than to experience as much of his birthplace as possible. That year he came into

contact with a wide range of people and took on many trades. Kim drank and dined with government officials, went on pilgrimages with corporate tycoons and marched in the streets against foreign aggression. He sold sticky rice, was a tennis player and also a ball boy, attended all manner of rituals and celebrations, eavesdropped on people in caf  s and restaurants, and went back to the classroom as both a student and a teacher. Rich in detail and broad in scope, these tales capture Kim's experiences and imaginings of Vietnam as if....

Branding guru Aaker shows how to eliminate the competition and become the lead brand in your market This ground-breaking book defines the concept of brand relevance using dozens of case studies- Prius, Whole Foods, Westin, iPad and more-and explains how brand relevance drives market

dynamics, which generates opportunities for your brand and threats for the competition. Aaker reveals how these companies have made other brands in their categories irrelevant. Key points: When managing a new category of product, treat it as if it were a brand; By failing to produce what customers want or losing momentum and visibility, your brand becomes irrelevant; and create barriers to competitors by supporting innovation at every level of the organization. Using dozens of case studies, shows how to create or dominate new categories or subcategories, making competitors irrelevant Shows how to manage the new category or subcategory as if it were a brand and how to create barriers to competitors Describes the threat of becoming irrelevant by failing to make what customer are buying or losing energy David Aaker, the author of four brand

books, has been called the father of branding This book offers insight for creating and/or owning a new business arena. Instead of being the best, the goal is to be the only brand around-making competitors irrelevant.

Since the production of many low-cost man-made fibers shifted to China and other Asian countries, Japanese companies have focused on

production of high-quality, high-performance super fibers as well as highly functionalized fibers so-called 'Shin-gosen'. Zylon™ and Dyneema™ manufactured by Toyobo, Technora™ produced by Teijin, and Vectran™ developed by Kuraray are those examples of super fibers. Carbon fibers Torayca™ from Toray have occupied the most advanced high-performance application area. Various types of polyester fibers having design-shaped cross-sections and special fiber morphologies and those showing specific physico-chemical properties have also been developed to acquire a high-value textile market of the world. This book describes how these high-tech fibers have been developed and what aspects are the most important in each fiber based

on its structure-property relationship. Famous specialists both in industry and academia are responsible for the contents, explaining the design concepts and the special technologies for the production of these special fibers. For university teachers and students, this volume is an excellent textbook that elucidates the basic concepts of modern fibers. At the same time, researchers, both in academia and industry, will find a comprehensive overview of recent man-made fibers. This publication, presenting the most easily understandable general survey of specialty man-made fibers to date, is dedicated to the 70th-anniversary of the Society of Fiber Science and Technology, Japan.

Army engineer support to U.S. Central Command's joint maneuver force during the Persian Gulf War was massive and critical. Over 100 active and reserve component engineer units contributed significantly to the success of Operation DESERT SHIELD/DESERT STORM. These contributions are well documented in *Supporting the Troops: The U.S. Army Corps of Engineers in the Persian Gulf War*. The Gulf War dramatically demonstrated the need to deploy engineers early so that they can determine the engineer requirements, communicate those requirements to the maneuver commanders, and take appropriate steps to bed down and sustain U.S. forces. The delayed flow of engineers and their equipment into Southwest Asia directly affected the ability of the maneuver units to sustain themselves and operate effectively. We are now moving toward a smaller, quality Army with rapidly deployable forces. There are fewer engineer units than in 1990, and a larger proportion of the engineer force is in the reserve components. As

the active component force continues to shrink, we must insure that the reserve component engineer forces are well trained and ready to deploy on short notice. During the Gulf War engineers provided the model for the Total Army concept, successfully blending Active Army, Army National Guard, Army Reserve, and Department of Defense civilian engineer capabilities. U.S. forces could not have succeeded in the Gulf without the assistance of the reserve components and civilians. The force structure of today's Active Army does not include a number of specialized engineer units needed to support a large-scale deployment. Nor do operational engineer units have all the special expertise that can be found in the U.S. Army Corps of Engineers. As Supporting the Troops vividly illustrates, the contributions of the Corps' military and civilian members were diverse and significant. Over 160 Corps civilians, who voluntarily deployed to Southwest Asia, provided procurement, design, construction, and real estate support. Corps members worked

diligently, often in difficult conditions, to provide for the well-being and safety of tens of thousands of U.S. soldiers. They devised creative solutions to the problems they, encountered, whether implementing new policies or developing new project designs. It was my privilege to serve with them in the Persian Gulf. Hydrogen and Fuel Cell Springer Science & Business Media

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integerating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even

governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of auto- tive development - the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road s- face via gearboxes, transmission shafts and wheels, which together with spri- damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.
