Australian Bird Names is aimed at anyone with an interest in birds, words, or the history of Australian biology and bird-watching. It discusses common and scientific names of every Australian bird, to tease out the meanings, which may be useful, useless or downright misleading! The authors examine every species: its often many-and-varied common names, its full scientific name, with derivation, translation and a guide to pronunciation. Stories behind the name are included, as well as relevant aspects of biology, conservation and history. Original descriptions, translated by the authors, have been sourced for many species. As well as being a book about names this is a book about the history of ever-developing understandings of birds, about the people who contributed and, most of all, about the birds themselves.

Women earn nearly half of all new PhDs in Canada, the United States, Australia, New Zealand, and the United Kingdom. Why, then, do they occupy a disproportionate number of the junior-level university positions while men occupy 80 percent of the more prestigious jobs? In *Academic Careers and the Gender Gap* Maureen Baker draws on candid interviews with male and female scholars, previous research, and her own thirty-eight-year academic career to explain the reasons behind this inequality. She argues that current university priorities and collegial relations often magnify the impact of gendered families and identities and perpetuate the gender gap. Tracing the evolution of university priorities and practices, Baker reveals significant and persistent differences in job security, working hours, rank, salary, job satisfaction, and career length between male and female scholars.

Banking is an industry that deals with credit, cash holding, investments, and other types of financial operations. Because it allocates cash to borrowers with productive investments, the banking industry is one of the most important drivers of most economies. Deposits and withdrawals, currency exchange, forex trading, and wealth management are all services provided by banks. They also serve as a conduit between depositors and borrowers, using the monies placed by their customers to provide credit to those who need it. Banks make money by charging interest on loans, which they benefit from by charging a greater interest rate than they pay on customer deposits. They must, however, follow the rules set down by the central bank or the national government. A bank is a financial institution that accepts deposits from customers and provides loans to individuals and businesses. Banks profit by charging greater interest rates on loans than they do on customer deposits. In the United States, banks are mandated to hold 10% of client deposits as reserves, while the remaining 90% is used to make loans. How the Banking Industry Works - Banking Fundamentals The Federal Reserve regulates banks in the United States. Banks must keep at least 10% of each deposit on hand, but they can lend out the remaining 90% as loans. The reserve requirement applies to all types of banks with a US banking licence, and the reserve can be held as a deposit in a local Fed bank or as cash in the vault.
