The Gremlin, Pacer and Eagle vehicles are examined in detail, as are the AMC custom cars of George Barris and Carl Green. The text details AMC's 1980s involvement with the French firm Renault and the design legacy of that joint venture, which includes the Hummer. The evolution of Jeep is covered from the 1960s through the 2000s. Features include some 225 photographs; a listing of AMC / Rambler clubs, organizations and business entities, with contact details; tables of detailed specifications and performance data; data on technical devices, trim packages and all model variations; a comprehensive account of AMC / Rambler appearances in film, television and cartoons.

Lone Star Travel Guide to Texas Hill Country MotorBooks International
The man known as Clark Durbin worked for the Comstock National Bank as a consultant in computer programming for over a year. Durbin was described as approximately 65 years old, had a full head of gray hair and a full beard that was also gray. He was approximately six foot tall and was overweight. He had a cheerful demeanor and sparkling blue eyes—the type of individual one was inclined to instinctively trust. This was of course a disguise. He was actually 48 years old, five foot eleven inches tall, weighed 170 pounds, had brown hair, brown eyes, was clean shaven, and his name was not Mark Durbin. After the fraudulent transfer of fifty million dollars to a numbered account in Zurich, Durbin disappeared, leaving no tracks. Jeremiah Jones, a private investigator with a reputation for finding people who don’t want to be found, was contracted by the bank to recover the money and find the thief. The thief’s ability to make himself seemingly invisible challenged Jeremiah’s tracking skills. Tracking is done in the mind as much or more than by following physical or electronic tracks, which in this case were few. After some misdirection, false trails, and bad assumptions, Jeremiah, at a considerable personal risk, successfully located the money and returned it to the bank. However, identifying the thief proved to be even more challenging.

The Cars of American Motors Dorrance Publishing
The U.S. and Mexican border regions have experienced rapid demographic and economic growth over the last fifty years. In this analysis, Joan Anderson and James Gerber offer a new perspective on the changes and tensions pulling at the border from both sides through a discussion of cross-border economic issues and thorough analytical research that examines not only the dramatic demographic and economic growth of the region, but also shifts in living standards, the changing political climate, and environmental pressures, as well as how these affect the lives of people in the border region. Creating what they term a Border Human Development Index, the authors rank the quality of life for every U.S. county and Mexican municipio that touches the 2,000-mile border. Using data from six U.S. and Mexican censuses, the book adeptly illustrates disparities in various aspects of economic development between the two countries over the last six decades. Anderson and Gerber make the material accessible and compelling by drawing an evocative picture of how similar the communities on either side of the border are culturally, yet how divided they are economically. The authors bring a heightened level of insight to border issues not just for academics but also for general readers. The book will be of particular value to individuals interested in how the border between the two countries shapes the debates on quality of life, industrial growth, immigration, cross-border integration, and economic and social development.

The focus of the book is on the driving dynamics of racing vehicles. The interaction of the tyre, the aerodynamics, of the chassis and the limited slip differential specific to racing vehicles is dealt with. A chapter on the basics of vehicle dynamics makes it possible to get started with this topic even without prior automotive engineering training. A historical review and a consideration of the essential safety aspects create an understanding of higher-level requirements, which are specified, for example, by the technical regulations.
