Finally, a rebuild and performance guide for GM 6.2 and 6.5L diesel
engines! In the late 1970s and early 1980s, there was considerable pressure
on the Detroit automakers to increase the fuel efficiency for their
automotive and light-truck lines. While efficient electronic engine controls
and computer-controlled gas engine technology was still in the
developmental stages, the efficiency of diesel engines was already well
documented during this time period. As a result, General Motors added
diesel engine options to its car and truck lines in an attempt to combat high
gas prices and increase fuel efficiency. The first mass-produced V-8 diesel
engines of the era, the 5.7L variants, appeared in several General Motors
passenger-car models beginning in 1978 and are often referred to as the
Oldsmobile Diesels because of the number of Oldsmobile cars equipped
with this option. This edition faded from popularity in the early 1980s as a
result of falling gas prices and quality issues with diesel fuel suppliers,
giving the cars a bad reputation for dependability and reliability. The 6.2L
appeared in 1982 and the 6.5L in 1992, as the focus for diesel applications
shifted from cars to light trucks. These engines served faithfully and
remained in production until 2001, when the new Duramax design replaced
it in all but a few military applications. While very durable and reliable,
most of these engines have a lot of miles on them, and many are in need of
a rebuild. This book will take you through the entire rebuild process step
by step from diagnosis to tear down, inspection to parts sourcing,
machining, and finally reassembly. Also included is valuable
troubleshooting information, detailed explanations of how systems work,
and even a complete Stanadyne DB2 rebuild section to get the most out of
your engine in the modern era. If you have a 6.2, or 6.5L GM diesel
engine, this book is a must-have item for your shop or library.

In February 1999, only a few weeks before the U.S. Air Force
spearheaded NATO's Allied Force air campaign against Serbia,
Col. C.R. Anderegg, USAF (Ret.), visited the commander of the
U.S. Air Forces in Europe. Colonel Anderegg had known Gen.
John Jumper since they had served together as jet forward air
controllers in Southeast Asia nearly thirty years earlier. From

the vantage point of 1999, they looked back to the day in
February 1970, when they first controlled a laser-guided bomb
strike. In this book Anderegg takes us from "glimmers of hope"
like that one through other major improvements in the Air Force
that came between the Vietnam War and the Gulf War. Always
central in Anderegg's account of those changes are the people
who made them. This is a very personal book by an officer who
participated in the transformation he describes so vividly. Much
of his story revolves around the Fighter Weapons School at
Nellis Air Force Base (AFB), Nevada, where he served two tours
as an instructor pilot specializing in guided munitions.
