Sam Posey raced a huge variety of sports cars, saloons and open-wheel machines in numerous racing arenas -- Can-Am, USRRC, Trans-Am, IMSA, Indy, NASCAR, Formula 5000 and Formula 1 -- against rivals and friends such as George Follmer, Parnelli Jones, Mark Donohue, Peter Revson, Dan Gurney, David Hobbs and Brian Redman. Sam's Scrapbook gives a first-hand account of a romantic era in racing, through pictures no one has seen and stories no one has heard. Running alongside the images, Posey's commentary is fascinating and thoughtful, and in turns both amusing and emotional. Sam's early days: racing around his mother's house on a farm in Connecticut against his friend John Whitman. The start of his career: driving at Lime Rock, his local track, under the mentorship of John Fitch; a ride as the then-youngest American at Le Mans, with a Bizzarrini in 1966. Can-Am: racing against John Surtees, Bruce McLaren and Jim Hall in this famous "anything goes" sports car championship with a car he and Ray Caldwell designed and built. Trans-Am: competing in this spectacular saloon series during its golden age, first for Roger Penske and then as a factory driver for Dodge, against George Follmer, Parnelli Jones and Swede Savage. Later years at Le Mans: finishing third overall in a Ferrari 512 M with the North American Racing Team (NART) team in 1971; driving the first BMW 3.0 CSL 'Art Car' in 1975, featuring a paint scheme by American sculptor Alexander Calder. Open-wheel racing: a duel with Dan Gurney in the USAC Championship, finishing fifth at Indy in 1972; two drives for John Surtees in Formula 1; battling his friend and rival David Hobbs on the track and off in Formula 5000. Even more variety: three years of off-road adventures in the Baja 1000; rides with the BMW factory team at Sebring and Daytona; and his late career in the IMSA championship with actor Paul Newman and Brian Redman. This is an unusual and engaging memoir by one of America's best-loved racing heroes and will appeal to all motorsports enthusiasts.

In the 1960s, model kit building was a huge hobby. Kids built plastic kits of planes, tanks, race cars, space ships, creatures from scary movies, you name it. Before baseball card collecting, Pokémon, and video games, model kit building was one of the most popular hobby activities. Car and airplane kits were the most popular, and among the car kits, muscle cars, as we know them today, were one of the most popular categories. Many owners of real muscle cars today were not old enough to buy them when the cars were new, of course. Yet kids of the 1960s and 1970s worshiped these cars to an extent completely foreign to kids today. If you couldn't afford or were too young to buy a muscle car back then, what could you do? For many, the next best thing was to buy, collect, and build muscle car kits from a variety of kit companies. Hundreds were made. Many of these kits have become collectible today, especially in original, unassembled form. Although people still build kits today, there is a broad market for collectors of nostalgic model kits. People love the kits for the great box art, to rekindle fond memories of building them 40 years ago, or even as a companion to the full-scale cars they own today. Here, world-leading authority Tim Boyd takes you through the entire era of muscle car kits, covering the options, collectability, variety availability, and value of these wonderful kits today. Boyd also takes you through the differences between the original kits, the older reproduction kits, and the new reproduction kits that many people find at swap meets today. If you are looking to build a collection of muscle car kits, interested in getting the kits of your favorite manufacturer or even just of the cars you have owned, this book will be a valuable resource in your model kit search.

The driving forces of income growth, demographic shifts, globalisation and technical change have led to a reorganisation of food systems from farm to plate. The characteristics of supply chains - particularly the role of supermarkets - linking farmers have changed, from consumption and retail to wholesale, processing, procurement and production. This has had a dramatic effect on smallholder farmers, particularly in developing countries. This book presents a comprehensive framework for assessing the impacts of changing agri-food systems on smallholder farmers, recognising the importance of heterogeneity between developing countries as well as within them. The book includes a number of case studies from Asia, Africa, Latin America and Eastern Europe, which are used to illustrate differences in food systems' characteristics and trends. The country case studies explore impacts on the small farm sector across different countries, local contexts and farm types

F1 Mavericks is the story of the grandest, most influential, and most fondly remembered era in Formula 1 racing as seen through the lens of master motorsports photographer, Pete Biro. The period from 1960 to 1982 saw the greatest technological changes in the history of Formula 1 racing: the transition from front engines to rear engines, narrow-treaded tires, massive racing slicks, zero downforce, and neck-wrenching ground effects—and, of course, a staggering increase in performance and reduction in lap times. In short, the period saw the creation of the modern Formula 1 car. This is also the time when legendary names who defined F1 were out in full force: Jim Clark, Jack Brabham, Dan Gurney, Sir Jackie Stewart, Graham Hill, Niki Lauda, James Hunt, Bruce McLaren, Jody Scheckter. We ' ll see and meet all of them. But F1 Mavericks also focuses on the designers and engineers behind the cars—men like Colin Chapman, Sir Patrick Head, Maurice Philippe, Franco Rochhi, Gordon Murray, and many others. We ' ll hear directly from many of them, including a foreword from 1978 F1 World Champion, Mario Andretti. Every chapter is a photographic account of key races throughout the period, supplemented with sidebars featuring key designers and technologies, like wings, ground effects, slick tires, turbochargers, and the Brabham " fan " suction car. F1 Mavericks is an international story, and includes loads of information on designs from Japan (Honda), Britain (McLaren, Tyrrell,

Cooper, BRM) Italy (Ferrari, Maserati, Alfa Romeo), France (Matra, Ligier, Renault), Germany (Porsche, BMW) and the United States (Eagle, Shadow, Penske, Parnelli). Strap yourself in for the story of the greatest era in Formula 1 racing—it's all here in F1 Mavericks.

When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"—smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

During the past two decades, virus taxonomy has advanced to the point where most viruses can be classified as belonging to families, genera, or groups of related viruses. Virus classification is primarily based on chemical and physical similarities, such as the size and shape of the virion, the nature of the genomic nucleic acid, the number and function of component proteins, the presence of lipids and of additional structural features, such as envelopes, and serological interrelationships. The families, genera, or groups of viruses that have been defined on the basis of such criteria by the International Committee on Taxonomy of Viruses (ICTV) will be described in some detail in this catalogue and illustrated by electron micrographs. In my present attempt to list most if not all well established and studied viruses in alphabetical order, I have largely confined myself to identifying them only in such taxonomic terms, generally without quoting specific data reported for individual viruses. If the latter data do not at times agree closely with those given for the taxon or group, it is difficult to decide to what extent this is attributable to misclassification due to insufficient data and errors in the analytical procedures and descriptions, or to what extent this is an expression of Nature's freedom of choice and abhorrence of restrictive classifications.
