Emergency Medical Services (EMS) is a critical component of our nation's emergency and trauma care system, providing response and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times, ambulance diversions, trauma center closures, and ground and air medical crashes. This heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system. Emergency Medical Services provides the first comprehensive study on this topic. This new book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery, and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns: • The evolving role of EMS as an integral component of the overall health care system. • EMS system planning, preparedness, and coordination at the federal, state, and local levels. • EMS funding and infrastructure investments. • EMS workforce trends and professional education. • EMS research priorities and funding. Emergency Medical Services is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency care providers, professional organizations, and policy makers looking to address the deficiencies in emergency care systems.

How do the rich get rich? An updated edition of the "remarkable" New York Times bestseller, based on two decades of research (The Washington Post). Most of the truly wealthy in the United States don't live in Beverly Hills or on Park Avenue. They live next door. America's wealthy seldom get that way through an inheritance or an advanced degree. They bargain-shop for used cars, raise children who don't realize how rich their families are, and reject a lifestyle of flashy exhibitionism and competitive spending. In fact, the glamorous people many of us think of as "rich" are actually a tiny minority of America's truly wealthy citizens—and behave quite differently than the majority. At the time of its first publication, The Millionaire Next Door was a groundbreaking examination of America's rich—exposing for the first time the seven common qualities that appear over and over among this exclusive demographic. This edition includes a new foreword by Dr. Thomas J. Stanley—updating the original content in the context of the financial crash and the twenty-first century. "Their surprising results reveal fundamental qualities of this group that are diametrically opposed to today's earn-and-consume culture." —Library Journal

A penetrating indictment of how today's largest tech companies are hijacking our data, our livelihoods, our social fabric, and our minds—from an acclaimed Financial Times columnist and CNN analyst WINNER OF THE PORCHLIGHT BUSINESS BOOK AWARD • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY FOREIGN AFFAIRS AND EVENING STANDARD "Don't be evil" was enshrined as Google's original corporate mantra back in its early days, when the company's cheerful logo still conveyed the utopian vision for a future in which technology would inevitably make the world better, safer, and more prosperous. Unfortunately, it's been quite a while since Google, or the majority of the Big Tech companies, lived up to this founding philosophy. Today, the utopia they sought to create is looking more dystopian than ever: from digital surveillance and the loss of privacy to the spreading of misinformation and hate speech to predatory algorithms targeting the weak and vulnerable to products that have been engineered to manipulate our desires. How did we get here? How did these once-scrappy and idealistic enterprises become rapacious monopolies with the power to corrupt our elections, co-opt all our data, and control the largest single chunk of corporate wealth—while evading all semblance of regulation and taxes? In Don't Be Evil, Financial Times global business columnist Rana Foroohar tells the story of how Big Tech lost its soul—and ate our lunch. Through her skilled reporting and unparalleled access—won through nearly thirty years covering business and technology—she shows the true extent to which behemoths like Google, Facebook, Apple, and Amazon are monetizing both our data and our attention, without us seeing a penny of those

exorbitant profits. Finally, Foroohar lays out a plan for how we can resist, by creating a framework that fosters innovation while also protecting us from the dark side of digital technology. Praise for Don't Be Evil "At first sight, Don't Be Evil looks like it's doing for Google what muckraking journalist Ida Tarbell did for Standard Oil over a century ago. But this whip-smart, highly readable book's scope turns out to be much broader. Worried about the monopolistic tendencies of big tech? The addictive apps on your iPhone? The role Facebook played in Donald Trump's election? Foroohar will leave you even more worried, but a lot better informed."—Niall Ferguson, Milbank Family Senior Fellow at the Hoover Institution, Stanford, and author of The Square and the Tower

'Social Entrepreneurship' is a term that has come to be applied to the activities of grass-roots activists, NGOs, policy makers, international institutions, and corporations, amongst others, which address a range of social issues in innovative and creative ways. Themed around the emerging agendas for developing new, sustainable models of social sector excellence and systemic impact, Social Entrepreneurship offers, for the first time, a wide-ranging, internationally-focused selection of cutting-edge work from leading academics, policy makers, and practitioners. Together they seek to clarify some of the ambiguity around this term, describe a range of social entrepreneurship projects, and establish a clear set of frameworks with which to understand it. Included in the volume are contributions from Muhammad Yunus, winner of the 2006 Nobel Peace Prize and the father of microfinance, Geoff Mulgan, former head of the British prime minister's policy unit, and Bill Drayton, founder of the Ashoka network of social entrepreneurs. Jeff Skoll, founder of the Skoll Foundation, and first president of eBay, provides a preface. Alex Nicholls provides a substantial new preface to this paperback edition, reflecting on the latest developments in the study and practice of social entrepreneurship.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: –Build an accurate threat model for your vehicle –Reverse engineer the CAN bus to fake engine signals –Exploit vulnerabilities in diagnostic and data-logging systems –Hack the ECU and other firmware and embedded systems –Feed exploits through infotainment and vehicle-to-vehicle communication systems –Override factory settings with performance-tuning techniques –Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

Launch! Advertising and Promotion is written for advertising and promotion courses taught to students in the business school and journalism & mass communication students. This textbook is the first of its kind to teach advertising concepts by reverse engineering a real advertising campaign from beginning to end. In April 2007, SS+K, an innovative New York City communications agency, launched the first ever

branding campaign for msnbc.com with the tag "A Fuller Spectrum of News." Launch! follows that campaign from initial agency pitch through roll-out of print and media assets to post-campaign analysis. Throughout, it exposes readers to the theory and concepts of advertising and promotion, and the personalities and decisions that drove this campaign. The book takes a rare look "behind the curtain" - even letting you see some of the paths not chosen by the agency and client. Students get a realistic sense of how theory plays out in practice, and get a flavor for the exciting field of advertising and promotion. And, they consistently learn the perspectives of both the advertising agency (where many journalism and communications students will work) and the client (where many marketing majors will work). This is a unique book, with a unique perspective, by a unique author team, and you won't find this kind of insight in any other text on the market. We think you're going to love it! This textbook has been used in classes at: Ball State University, Emerson College, Florida Institute of Technology, Grand Valley State University, Johnson County Community College, Manchester Business School, McLennan Community College, Michigan State University, North Hennepin Community College, Pierce College, Rochester Institute of Technology, Saint Louis University, Salem State College, South Dakota State University, Texas State University, Texas Tech University, University of New Hampshire, University of North Carolina, University of Notre Dame, University of South Florida, Virginia Tech, Western Kentucky University.
