Since its birth as a motorcycle company in

1949, Honda has steadily grown into one of the world's largest automakers and engine manufacturers, as well as one of the most beloved, most profitable, and most consistently innovative multinational corporations. What drives the company that keeps creating and improving award-winning and bestselling models like the Civic, Accord, Odyssey, CR-V, and Pilot? According to Jeffrey Rothfeder, what truly distinguishes Honda from its competitors, especially archrival Toyota, is a deep commitment to a set of unorthodox management tenets. The Honda Way, as insiders call it, is notable for decentralization over corporate control, simplicity over complexity, experimentation over Six Sigma – driven efficiency, and unyielding cynicism toward the status quo and whatever is assumed to be the truth. Those are just a few of

the ideas that the company's colorful founder Soichiro Honda embedded in the DNA of his start-up sixty-five years ago. As the first journalist allowed behind Honda's infamously private doors, Rothfeder interviewed dozens of executives, engineers, and frontline employees about Honda's management practices and global strategy. He shows how the company developed and maintained its unmatched culture of innovation, resilience, and flexibility—and how it exported that culture to other countries that are strikingly different from Japan, establishing locally controlled operations in each region where it lays down roots. The 1973 oil crisis forced the American automotive industry into a period of dramatic change, marked by stiff foreign competition, tougher product regulations and

suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive "need-for-speed" engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various "captive imports" (e.g. Dodge's Colt, built by Mitsubishi.) Within each model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain

offerings, prices, standard features, major options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.

Today, there are over 40 million conflict-induced internally displaced persons (IDPs) globally, almost double the number of refugees. Yet, IDPs are protected only by the soft-law Guiding Principles on Internal Displacement at the global level. Instead of a dedicated international organization, IDPs receive protection and assistance only through the UN's cluster approach. Orchard argues that while an international IDP protection regime exists, many aspects of it are informal, with IDP issues bound up in a humanitarian regime complex that divides the mandates

of key organizations and even the question of IDP status itself. While the Guiding Principles mark an important step forward, implementation of laws and policies based on them at the domestic level remains haphazard. Action at the international level similarly reflects an all-too-often ad hoc approach to IDP issues. Through an in-depth examination of IDP efforts at the international level and across the forty states which have adopted IDP laws and policies, Orchard argues that while progress has been made, new and greater monitoring and accountability mechanisms at both the domestic and international levels are critical. This work will be valuable to scholars, students, and practitioners of forced migration, international relations theory, and the Responsibility to Protect doctrine.
