Any liberal democratic state must honour religious and cultural pluralism in its educational policies. To fail to honour them would betray ideals of freedom and toleration fundamental to liberal democracy. Yet if such ideals are to flourish from one generation to the next, allegiance to the distinctive values of liberal democracy is a necessary educational end, whose pursuit will constrain pluralism. The problem of political education is therefore to ensure the continuity across generations of the constitutive ideals of liberal democracy, while remaining hospitable to a diversity of conduct and belief that sometimes threatens those very ideals. *Creating Citizens* addresses this crucial problem. In lucid and elegant prose, Professor Callan, one of the world's foremost philosophers of education, identifies both the principal ends of civic education, and the rights that limit their political pursuit. This timely new study sheds light on some of the most divisive educational controversies, such as state sponsorship and regulation of denominational schooling, as well as the role of non-denominational schools in the moral and political development of children. *Oxford Political Theory* presents the best new work in contemporary political theory. It is intended to be broad in scope, including original contributions to political philosophy, and also work in applied political theory. The series will contain works of outstanding quality with no restriction as to approach or subject matter. The series editors are David Miller and Alan Ryan.

The Sense of Hearing is a truly accessible introduction to auditory perception that is intended for students approaching the subject for the first time, and as a foundation for more advanced study. The second edition has been thoroughly revised throughout, and included new chapters on music, hearing impairment, and a new appendix describing research methodologies. In clear and authoritative prose, the fundamental aspects of hearing are addressed. The reader is introduced to the nature of sound and the spectrum, and the anatomy and physiology of the auditory system. Basic auditory processes including frequency selectivity, loudness and pitch perception, temporal resolution, and sound localization are explained. The reader is led to an understanding of the remarkable abilities of the auditory system in a systematic and coherent way. In subsequent chapters, it is shown how complex processes, such as perceptual organization, speech perception, and music perception, are dependent on the initial analysis that occurs when sounds enter the ear. Finally, a chapter on hearing impairment provides an introduction to disorders of the auditory system. The text benefits from 162 original illustrations, including uncluttered diagrams that illuminate auditory mechanisms. An extensive glossary provides definitions of technical terms. The emphasis is on explanation and clarity of style throughout, making The Sense of Hearing an essential resource for students and educators involved in this sometimes challenging field.
