Non-Exhaust Emissions: An Urban Air Quality Problem for Public Health comprehensively summarizes the most recent research in the field, also giving guidance on research gaps and future needs to evaluate the health impact and possible remediation of non-exhaust particle emissions. With contributions from some of the major experts and stakeholders in air quality, this book comprehensively defines the state-of-the-art of current knowledge, gaps and future needs for a better understanding of particulate matter (PM) emissions, from non-exhaust sources of road traffic to improve public health. PM is a heterogeneous mix of chemical elements and sources, with road traffic being the major source in large cities. A significant part of these emissions come from non-exhaust processes, such as brake, tire, road wear, and road dust resuspension. While motor exhaust emissions have been successfully reduced by means of regulation, non-exhaust emissions are currently uncontrolled and their importance is destined to increase and become the dominant urban source of particle matter by 2020. Nevertheless, current knowledge on the non-exhaust emissions is still limited. This is an essential book to researchers and advanced students from a broad range of disciplines, such as public health, toxicology, atmospheric sciences, environmental sciences, atmospheric chemistry and physics, geochemistry, epidemiology, built environment, road and vehicle engineering, and city planning. In addition, European and local authorities responsible for air quality and those in the industrial sectors related to vehicle and brake manufacturing and technological remediation measures will also find the book valuable. Acts as the first book to explore the health impacts of non-exhaust emissions Authored by experts from several sectors, including academia, industry and policy Gathers the relevant body of literature and information, defining the current knowledge, gaps and future needs

The Leading Edge DIANE Publishing

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Porsche: A History of Excellence

The purpose of this book is to provide a basic understanding of the aerodynamics involved in designing an ultra-streamlined land vehicle. It describes many of the important design goals and parameters for producing a low-drag body. It is designed to be a how-to manual for the budding ground-up solar car and ultralight vehicle constructor, as well as the solar /electric/ultralight vehicle enthusiast.

Consumers Index to Product Evaluations and Information Sources

No other sports car has had a run like Porsches, on the street or on the world's racetracks. This richly illustrated volume tells the story of that fabled marque.

Renowned automotive writer and photographer (and Porsche aficionado) Randy Leffingwell focuses his lens on each important model the first 356 to today's Cayman and 911. His pictures, in-depth analyses of each car and its context, and interviews with key personnel comprise a complete, compelling, and often revealing history of the world's premier name in sports cars.
