I did not cry. The moment came when Heather died; I did not shed a tear. I felt numb, like I was having an out of body experience, and I was watching myself go through the motions. There were things to do; people to call, it was not the time to begin to fall apart. I had just joined an elite club of grieving mothers. This was the club no one talked about or wanted to become a member of. From that moment on my life was getting a makeover that I didn't ask for let alone consent to allowing it to happen. It was beyond my control; I was not given a choice. This was and is my life now. I am a grieving mother for the rest of my life.

The Just-in-time (JIT) manufacturing system is an internal system in use by its founder, Toyota Motor Corporation, but it has taken on a new look. Toyota Production System, Second Edition systematically describes the changes that have occurred to the most efficient production system in use today. Since the publication of the first edition of this book in 1983, Toyota has integrated JIT with computer integrated manufacturing technology and a strategic information system. The JIT goal of producing the necessary items in the necessary quantity at the necessary time is an internal driver of production and operations management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to further reduce costs, increase quality, and improve lead time. The new Toyota production system

considers how to adapt production schedules to the demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, *Toyota Production System*, published in 1983, is the basis for this book. It was translated into many languages including Spanish, Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world.
