This is the first book that deals with technological innovation in Japanese animation industry from a management perspective. In reviewing prior research and explaining the history of the technology, the author raises the difficulty of dealing with new technologies. In particular, the focus is on systems that combine analog technology (drawing by hand) and digital technology (3D computer graphics or 3DCG) to create a product. This combined technology is referred to as "hybrid technology" in this book, and the

development and management of "hybrid products" using this technology are studied. The study was conducted in two stages. The first stage was to determine the engineers' (animators') perception of hybrid technology. The results showed that in terms of potential, the hybrid technology of hand-drawn animation combined with 3DCG was rated more highly by engineers than hand-drawn alone. However, in terms of the assessment at that time, hybrid technology was rated higher than 3DCG alone but lower than hand-drawn. Therefore, it was assumed that hybrid technology, while useful, would pose challenges with respect to systematic implementation. The second stage was the development management of hybrid products. The results showed that the "adaptive engineer," who openly accepts

other new technologies in the early stages of their emergence contributed to the integration of new and existing technologies.

This book explores the unfinished India – Pakistan Trade normalisation agenda (building upon the themes covered in the book “ India-Pakistan Trade: Strengthening Economic Relations ” published by Springer in 2014) and discusses the steps that must be undertaken in order to move the bilateral engagement forward. Given the commencement of bilateral state-level talks and the Indian government ’ s emphasis on South Asian integration, it adds impetus to the trade liberalisation process, while also providing essential recommendations for policymakers in both countries. The unfinished agenda faces obstacles such as the list of items for which export from India to Pakistan continues to be restricted; lack of

land borders and seamless cross-border transport services, which hampers the realisation of trade potential; negative reporting in the media, which influences traders ’ perceptions; and the continued occurrence of informal trade resulting from inadequacies of formal trade relations. The book examines various sectors, including the agricultural, textiles, automotive and pharmaceutical industries, given their predominance on the list of restricted items for bilateral trade. It also covers studies on unconventional and under-researched themes concerning informal trade, informational barriers to India – Pakistan trade, and opening new land borders for trade – all of which can play a facilitating role in realizing the untapped trade potential between India and Pakistan. The book also includes the second round of the India – Pakistan trade perception survey, which identifies impediments to India – Pakistan bilateral trade and assesses the change in traders ’ perceptions since the first round of the survey, which was published in 2014.

Since 1991, Anand Sharma and his TBM Consulting Group have helped dozens of companies become manufacturing successes using the revolutionary 3P Kaizen Breakthrough. Now Sharma and Patricia Moody, author of THE TECHNOLOGY MACHINE and THE PURCHASING MACHINE, introduce the concept for the first time in book form. Using three case studies; Maytag, Pella and Mercedes Benz, the authors demonstrate how this technique has led to dramatic manufacturing results. This includes a decrease in average production time and capital investment, an increase in productivity and a reduction in lead time. Filled with cutting edge strategies and information, THE PERFECT ENGINE is the only book managers will need to take their firms to a new level in manufacturing excellence.

This book is one of the first critical analyses of the automobile industry in India. It studies the sector in general and the passenger car industry in particular, and provides valuable insights

into the operation of Foreign Direct Investment (FDI) companies in a technology-intensive industry under changing economic regimes. The volume underlines the influence of the changing nature of foreign investment, the impact of economic reforms, technology regimes and industrial policy on growth, structural changes and development. It offers a detailed account of the trade performance of manufacturers in India's passenger car industry. It also looks at successful cases to draw policy lessons towards encouraging quality FDI and developing India as a base for world production. A useful addition to industry studies in India, this book with its wide coverage and contemporary analyses will interest scholars and researchers of economics, Indian economy and industrial policy, industrial economics, automobile industry and manufacturing sector, development economics and international economics. It will also appeal to policymakers, practitioners and industrial associations.
