Machining is an essential  
part of high-performance  
engine building and stock  
rebuilding, as well as  
certain servicing  
procedures. Although  
you may not own the  
expensive tooling and  
machining to perform all  
or any of the machining  
required for a quality  
build, you need to  
understand the  
principles, procedures,  
and goals for machining,  
so you can guide the  
machining process when

outsourced. Classic and  
older engines typically  
require extensive  
machining and almost  
every major component  
of engine, including  
block, heads, intake,  
crankshaft, and pistons,  
require some sort of  
machining and fitment. A  
detailed, authoritative,  
and thorough automotive  
engine-machining guide  
for the hard-core  
enthusiast has not been  
available until now. Mike  
Mavrigian, editor of  
Engine Building

through each important  
machining procedure. A  
stock 300-hp engine
