The New Domestic Automakers in the United States and Canada Stoddart Pub

This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late

1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

Lemon-Aid Used Cars 2001

American Automobile Association

This book provides a unique historical and qualitative review of ten foreign automakers with plants in developed North America from their early beginnings to their export entry into North America. The Weekly Japan Digest This is the third volume in a series which brings together a selection of the currently available lectures based on broad subject groupings. It focuses on two themes: process metallurgy, including the technical aspects of plant design and operation, and the organisation of the iron and steel industry, including its general structure and economic circumstances. Whilst there is occasional

overlap with the themes of Volume 1 (materials properties/behaviour and materials applications) and Volume 2 (metallography and the structure of iron and steels), the current volume compliments the earlier ones and completes the original concept of five themes to bring the anthology up to the present day.

Popular Science gives our readers the information and tools to improve their technology and their world.

The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
