Used Car Buying Guide Stoddart

Mazda launched its first rotary-engine car--the Cosmo--in 1966, and was the only car manufacturer to solve the problems associated with Wankel's radical engine design and allow the unit's potential to be fully enjoyed. The RX-7 of 1978 provided effortless and uncannily smooth performance, attributes that endeared the model to enthusiasts through three generations of production. Each reincarnation the RX-7 became more of a Grand Tourer, and less of a sports car (a mantle handed on to the MX-5/Miata). Global

sales reduced as the car moved upmarket until, in the new millennium, the model was only sold in its native Japan. Lavishly illustrated with high quality color photographs, RX-7 Mazda's Rotary Engine Sports Car provides an in-depth insight into this amazing production automobile.

This is the third volume in a series which brings together a selection of the currently available lectures based on broad subject groupings. It focuses on two themes: process metallurgy, including the technical aspects of plant design and operation, and the organisation of the iron and steel industry, including its general structure and economic circumstances. Whilst there is occasional overlap with the themes of Volume 1 (materials properties/behaviour and materials applications) and Volume 2 (metallography and the structure of iron and steels), the current volume compliments the earlier ones and completes the original concept of five themes to bring the anthology up to the present day.
