This book deals with numerical methods that preserve properties of Hamiltonian systems, reversible systems, differential equations on manifolds and problems with highly oscillatory solutions. A complete self-contained theory of symplectic and symmetric methods, which include Runge-Kutta, composition, splitting, multistep and various specially designed integrators, is presented and their construction and practical merits are discussed. The long-time behaviour of the numerical solutions is studied using a backward error analysis (modified equations) combined with KAM theory. The book is illustrated by numerous figures, treats applications from physics and astronomy, and contains many numerical experiments and comparisons of different approaches.

**Engineering Turbulence Modelling and Experiments 5** Springer Science & Business Media

Turbulence is one of the key issues in tackling engineering flow problems. As powerful computers and accurate numerical methods are now available for solving the flow equations, and since engineering applications nearly always involve turbulence effects, the reliability of CFD analysis depends increasingly on the performance of the turbulence models. This series of symposia provides a forum for presenting and discussing new developments in the area of turbulence modelling and measurements, with particular emphasis on engineering-related problems. The papers in this set of proceedings were presented at the 5th International Symposium on Engineering Turbulence Modelling and Measurements in September 2002. They look at a variety of areas, including: Turbulence modelling; Direct and large-eddy simulations; Applications of turbulence models; Experimental studies; Transition; Turbulence control; Aerodynamic flow; Aero-acoustics; Turbomachinery flows; Heat transfer; Combustion systems; Two-phase flows. These papers are preceded by a section containing 6 invited papers covering various aspects of turbulence modelling and simulation as well as their practical application, combustion modelling and particle-image velocimetry.

The International Handbook of Educational Change is a state of the art collection of the most important ideas and evidence of educational change. The book brings together some of the most influential thinkers and writers on educational change. It deals with issues like educational innovation, reform, restructuring, culture-building, inspection, school-review, and change management. It asks why some people resist change and what their resistance means. It looks at how men and women, older teachers and younger teachers, experience change differently. It looks at the positive aspects of change but does not hesitate to raise uncomfortable questions about many aspects of educational change either. It looks critically and controversially at the social, economic, cultural and political forces that are driving educational change. School leaders, system administration, teacher leaders, consultants, facilitators, educational researchers, staff developers and change agents of all kinds will find this book an indispensable resource for guiding them to both classic and cutting-edge understandings of educational change, no other work provides as comprehensive coverage of the field of educational change.

Many of these writers, whose chapters have been specially written for these books, have been investigating, helping initiate and implementing educational change, for most or all of their lengthy careers. Others are working on the cutting edge of theory and practice in educational change, taking the field in new or

even more challenging directions. And some are more skeptical about the literature of educational change and the assumptions on which it rests. They help us to approach projects of understanding or initiating educational change more deeply, reflectively and realistically. Educational change and reform have rarely had so much prominence within public policy, in so many different places. Educational change is ubiquitous. It figures large in Presidential and Prime Ministerial speeches. It is at or near the top of many National policy agendas. Everywhere, educational change is not only a policy priority but also major public news. Yet action to bring about educational change usually exceeds people's understanding of how to do so effectively.
